Biometric Authentication Davide Maltoni, Anil K. Jain, 2004-09-21 Biometric authentication is increasingly gaining popularity in a large spectrum of applications ranging from government programs e.g. national ID cards visas for international travel and the fight against terrorism to personal applications such as logical and physical access control Although a number of effective solutions are currently available new approaches and techniques are necessary to overcome some of the limitations of current systems and to open up new frontiers in biometric research and development The 30 papers presented at Biometric Authentication Workshop 2004 BioAW 2004 provided a snapshot of current research in biometrics and identify some new trends This volume is composed of five sections face recognition fingerprint recognition template protection and security other biometrics and fusion and multimodal biometrics For classical biometrics like fingerprint and face recognition most of the papers in Sect 1 and 2 address robustness issues in order to make the biometric systems work in suboptimal conditions examples include face detection and recognition under uncontrolled lighting and pose variations and fingerprint matching in the case of severe skin distortion Benchmarking and interoperability of sensors and liveness detection are also topics of primary interest for fingerprint based systems Biometrics alone is not the solution for complex security problems Some of the papers in Sect 3 focus on designing secure systems this requires dealing with safe template

storage checking data integrity and implementing solutions in a privacy preserving fashion The match on tokens approach provided that current accuracy and cost limitations can be satisfactorily solved by using new algorithms and hardware is certainly a promising alternative The use of new biometric indicators like eye movement 3D finger shape and soft traits e.g.
