Digital Image Processing and Analysis CHANDA, BHABATOSH, MAJUMDER, DWIJESH DUTTA, 2011-10-30 The second edition of this extensively revised and updated text is a result of the positive feedback and constructive suggestions received from academics and students alike It discusses the fundamentals as well as the advances in digital image processing and analysis both theory and practice to fulfil the needs of students pursuing courses in Computer Science and Engineering CSE and Electronics and Communication Engineering ECE both at undergraduate and postgraduate levels It is also considered useful for teachers professional engineers and researchers The second edition has three objectives First each and every chapter has been modified in the light of recent advances as well as emerging concepts Second a good deal of colour image processing has been incorporated A large number of line drawings and images have been included to make the book

student friendly Third some new problems have been added in almost all chapters to test the student s understanding of the real life problems The other distinguishing features of the book are A summary at the end of the chapter to help the student capture the key points About 320 line drawings and 280 photographs for easy assimilation of the concepts Chapter end problems for extensive practice and research

Digital Media Rimón Elias,2014-03-27 Focusing on the computer graphics required to create digital media this book discusses the concepts and provides hundreds of solved examples and unsolved problems for practice Pseudo codes are included where appropriate but these coding examples do not rely on specific languages The aim is to get readers to understand the ideas and how concepts and algorithms work through practicing numeric examples Topics covered include 2D Graphics 3D Solid Modelling Mapping Techniques Transformations in 2D and 3D Space Illuminations Lighting and Shading Ideal as an upper level undergraduate text Digital Media A Problem solving Approach for Computer Graphic approaches the field at a conceptual level thus no programming experience is required just a basic knowledge of mathematics and linear algebra

Image Processing and Machine Learning, Volume 2 Erik Cuevas,Alma Nayeli Rodríguez,2024-02-16 Image processing and machine learning are used in conjunction to analyze and understand images Where image processing is used to pre process images using techniques such as filtering segmentation and feature extraction machine learning algorithms are used to interpret the processed data through classification clustering and object detection This book serves as a textbook for students and instructors of image processing covering the theoretical foundations and practical applications of some of the most prevalent image processing methods and approaches Divided into two volumes this second installment explores the more advanced concepts and techniques in image processing including morphological filters color image processing image matching feature based segmentation utilizing the mean shift algorithm and the application of singular value decomposition for image compression This second volume also incorporates several important machine learning techniques applied to image processing building on the foundational knowledge introduced in Volume 1 Written with instructors and students of image processing in mind this book s intuitive organization also contains appeal for app developers and engineers
