Pressure-Actuated Cellular Structures for Adaptive Wingtips Patrick Meyer, 2025-08-01 Aviation has a substantial environmental impact necessitating a shift towards more sustainability High aspect ratio HAR wings increase the efficiency of future transport aircraft by significantly reducing induced drag and consequently fuel consumption However the extended wingspan of HAR wings is accompanied by challenges including ground operations structural loads and aircraft control Folding wingtips FWTs address these challenges by incorporating a hinge at the outboard wing section enabling the wingtip to fold during ground operations or specific flight scenarios Wingtip actuators that allow active adjustment of the wingtip s cant angle and hinge stiffness can expand the potential operating modes of FWTs beyond the current state of the art Possible operating modes include extended load alleviation mission adaptability advanced flight control and active flutter suppression While most research on FWTs focuses on flight dynamics and aeroelasticity little attention has been given to the structural design of wingtip actuators This book introduces an actuator concept that transforms FWTs into multifunctional wingtip devices referred to as actuated adaptive wingtips The concept of actuated adaptive wingtips is based on a compliant morphing structure that adapts its mechanical properties by varying the fluid pressure in structure integrated chambers

materials usage This book will be of value to scientists engineers and in polymer materials science **Lectures Notes on Advanced Structured Materials 2** Holm Altenbach, Leonhard Hitzler, Michael Johlitz, Markus Merkel, Andreas Öchsner, 2024-03-19 The postgraduate seminar series on advanced structured materials is designed to facilitate teaching and informal discussion in a supportive and friendly environment The seminar provides a forum for postgraduate students to present their research results and train their presentation and discussion skills Furthermore it allows for extensive discussion of current research being conducted in the wider area of advanced structured materials Doing so it builds a wider postgraduate community and offers networking opportunities for early career researchers In addition to focused lectures the seminar provides specialized teaching overview lectures from experienced senior academics The 2023 Postgraduate Seminar entitled Advanced Structured Materials Development Manufacturing Characterization Applications was held from 20th till 24th February 2023 in Barcelona The presented postgraduate lectures had a strong focus on polymer mechanics composite materials and additive manufacturing **Verarbeitung und Charakterisierung von Polyamid**

6-Polyhydroxybutyrat-Blends Dill, Svenja, 2020-06-04 Aufgrund der deutlich unterschiedlichen Verarbeitungsbereiche von Polyhydroxybutyrat PHB und Polyamid 6 PA 6 ist die gemeinsame Verarbeitung der beiden Polymere eine verfahrenstechnische Herausforderung Um die Verträglichkeit und Prozessfähigkeit der PA 6 PHB Blends beurteilen zu können wurde somit zunächst ein geeigneter Aufbereitungsprozess auf einem Doppelschneckenextruder entwickelt Zudem erfolgte die Herstellung von maleierten PHB C als Verträglichkeitsvermittler An zwei und dreikomponentigen Blends konnte gezeigt werden dass die Herstellung der Blends möglich ist diese jedoch zu ausgeprägter Koaleszenz neigen Die C Typen bewirken zwar teilweise eine Verfeinerung der Morphologie vermeiden die Koaleszenz jedoch nicht effektiv Durch rasterkraftmikroskopische Aufnahmen und mechanische Untersuchungen kann allerdings eine begrenzte Kompatibilisierungswirkung nachgewiesen werden Zudem wird deutlich dass ein synergistischer Versteifungseffekt zu erhöhten Zugmodulen der Blends führt Hierdurch werden im spritzgetrockneten Zustand bis zu 131% des reinen PA 6 Wertes und nach der Konditionierung 151% erreicht Mittels dynamischer Differenzkalorimetrie und Fourier Transformations Infrarotspektroskopie konnte der Effekt auf die Erhöhung der Kristallinität zurückgeführt werden Due to the significantly different processing ranges of polyhydroxybutyrate PHB and polyamide 6 PA 6 the combined processing of the two polymers is a process engineering challenge In order to assess the compatibility and processability of the PA 6 PHB blends a suitable compounding process was therefore first developed on a twin screw extruder In addition the production of maleated PHB C as a compatibilizer was carried out It could be shown on two and three component blends that it is possible to produce the blends but that they tend to have a pronounced coalescence Although the C types partially refine the morphology they do not effectively prevent coalescence However a limited compatibility effect can be demonstrated by atomic force microscopic images and mechanical examinations Furthermore a synergistic stiffening effect leads to increased tensile moduli of the

blends This results in up to 131% of the pure PA 6 value in the dry as mould state and 151% after conditioning Using dynamic differential calorimetry and Fourier transform infrared spectroscopy the effect could be attributed to the increase in crystallinity Insights and Innovations in Structural Engineering, Mechanics and Computation Alphose Zingoni,2016-11-25 Insights and Innovations in Structural Engineering Mechanics and Computation comprises 360 papers that were presented at the Sixth International Conference on Structural Engineering Mechanics and Computation SEMC 2016 Cape Town South Africa 5 7 September 2016 The papers reflect the broad scope of the SEMC conferences and cover a wide range of engineering structures buildings bridges towers roofs foundations offshore structures tunnels dams vessels vehicles and machinery and engineering materials steel aluminium concrete masonry timber glass polymers composites laminates smart materials **Micromechanical modeling of short-fiber reinforced composites** Mueller, Viktor,2016-06-16 This work is focused on the prediction of elastic behavior of short fiber reinforced composites by mean field homogenization methods which account for experimentally determined and artificially constructed microstructure data in discrete and averaged form The predictions are compared with experimental measurements and a full field voxel based approach It is investigated whether the second order orientation tensor delivers a sufficient microstructure description for such predictions **Failure Analysis for Plastics Products** Rainer Dahlmann,2024-09-23 Damage to plastic products requires immediate action in often complex situations Failure and damage analysis is then an important tool for avoiding further economic losses and in the next steps for quality assurance and product safety In order to solve problems and develop remedial measures basic knowledge of plastics analysis materials and typical damage mechanisms as well as systematic approach are necessary The book supports the reader in all these points by providing a basic insight into the systematic approach and serving as a guide for practical implementation In particular manufacturing and material related aspects are also taken into account so that a comprehensive and universal method for determining the causes of damage to plastic products is presented Examples in the form of briefly summarized cases of damage from practical experience as a damage analyst round off the descriptions of the procedure **Material Modeling and Structural Mechanics** Holm Altenbach,Michael Beitel Schmidt,Markus Kästner,Konstantin Naumenko,Thomas Wallmersperger,2022-03-30 This book presents various questions of continuum mechanical modeling in the context of experimental and numerical methods in particular multi field problems that go beyond the standard models of continuum mechanics In addition it discusses dynamic problems and practical solutions in the field of numerical methods It focuses on continuum mechanics which is often overlooked in the traditional division of mechanics into statics strength of materials and kinetics The book is dedicated to Prof Volker Ulbricht who passed away on April 9 2021 **Maschinenelemente 1** Gustav Niemann,Hans Winter,Bernd-Robert Höhn,Karsten Stahl,2019-09-23 In ihrem Buch Maschinenelemente Band 1 Konstruktion und Berechnung von Verbindungen Lagern Wellen bieten die Autoren Niemann Winter H hn und Stahl einen optimalen Gesamtberblick sowie umfassende Detailinformation zu allen relevanten Themen auf

Stahlbau-Kalender 2023 Ulrike Kuhlmann, 2023-04-05 Der Stahlbau Kalender 2023 widmet sich mit Werkstoffe und Verbindungen zwei Schwerpunkten die zusammenwirken denn die Auswahl der Stahlsorten und die Wahl der Verbindungen sind für wirtschaftliche und nachhaltige Entwurfe und Konstruktionen essentiell Der Stahlbau Kalender dokumentiert verlässlich und aus erster Hand den aktuellen Stand der Stahlbau Regelwerke In diesem Sinne werden neben der Aktualisierung des Kommentars zu Eurocode 3 Teil 1-8 Bemessungsregeln von Anschlüssen vor dem Hintergrund der Entwicklung der zweiten Eurocode Generation die wesentlichen strukturellen und technischen Änderungen vorgestellt und erläutert Neben dem klassischen Baustahl werden die nichtrostenden Stähle betrachtet die z.B. bei Außenbauteilen wie Fassadenkonstruktionen aber auch in anderen Fällen den Ausschlag für Projekte in Stahlbauweise geben Wie immer bewegen sich alle Kapitel nahe an der Ingenieurpraxis und enthalten zahlreiche Beispiele Das Buch ist ein Wegweiser für die richtige Berechnung und Konstruktion im gesamten Stahlbau mit neuen Themen in jeder Ausgabe Herausragende Autoren aus der Industrie aus Ingenieurbüros und aus der Forschung vermitteln Grundlagen und geben praktische Hinweise

Analytische Charakterisierung und Modifizierung von Pulverlack-Overspray zum Einsatz als Füllstoff für Polyethylen John-Müller, Astrid, 2018-10-10 In der pulverlackverarbeitenden Industrie fallen erfahrungsgemäß je nach Beschichtungsanlage zwischen 0-5 % und 55 % Overspray und abgelagerte Gebinde an Die Entsorgung dieser Pulverlackreste auf Deponien oder durch Verbrennung sind sehr kostenintensiv und belasten die Umwelt Das Ziel dieser Arbeit beinhaltet das Recycling von Pulverlackresten als Füllstoffe für Thermoplaste Die wesentliche Herausforderung bestand darin die Metallhaftung durch thermische Aushärtung der noch chemisch aktiven Pulverlackreste an den Extrusion oder Spritzgussanlagen zu verhindern Als Lösungsweg wurde die chemische Deaktivierung mittels Reaktanten verfolgt Eine Enthftung konnte mit Stearinsäure in

einer Konzentration von 2 Gew % erzielt werden Für eine erste Eigenschafts- und Materialprüfung wurden Pulverlackreste mit Stearinsäure vermischt und als Recycling-Füllstoff im Verhältnis 50/50 mit LLDPE zu Präformern verarbeitet Die mechanischen Werte der Proben waren geringer als die Resultate mit reinem LLDPE Das Ziel dieser Arbeit wurde erreicht Für unausgehärtete Pulverlackreste wurde mit 2 Gew % Stearinsäure ein Reaktand gefunden, welcher die Metallhaftung nach thermischer Aushärtung vollständig aufhebt Reports from the powder coating industry indicate that 0.5 to 55 % of the powder coating resins depending on the coating system ends up as overspray or becomes unusable due to degradation The disposal of these powder coating residues at landfills or by waste incineration is very expensive and pollutes the environment The goal of this work was the recycling of powder coating residues as fillers for thermoplastic polymers The biggest challenge was to prevent the metal adhesion of the still chemically active powder coating residues in extrusion or injection molding Machines caused by its thermal curing The main approach was the chemical deactivation through a reactant A deactivation was realized with stearic acid in a concentration of two percent by weight For a first test of material properties powder coating residue was mixed with stearic acid and used as recycle filler in a ratio of 50/50 with LLDPE to be processed to standard test bars The mechanical values were lower than those of the neat LLDPE 20th Symposium on Composites Christian
