Divine Accommodation John W. Hilber, 2020-04-03 In order to reconcile the discrepancies between ancient and modern cosmology confessional scholars from every viewpoint on the interpretation of the early chapters of Genesis agree that God accommodated language to finite human understanding But in the history of interpretation no consensus has emerged regarding what accommodation entails at the linguistic level More precise consideration of how the ancient cognitive environment functions in the informative intention of the divine and human authors is necessary Not only does relevance theory validate interpretative options that are inherently most probable within the primary communication situation but the

application of relevance theory can also help disentangle the complexities of dual authorship inherent in any model of accommodation. The results also make a salutary contribution to the theological reading of Scripture.

Encyclopedia of Cosmology (Routledge Revivals) Norriss S. Hetherington, 2014-04-08 The Encyclopedia of Cosmology first published in 1993 recounts the history philosophical assumptions methodological ambiguities and human struggles that have influenced the various responses to the basic questions of cosmology through the ages as well as referencing important scientific theories. Just as the recognition of social conventions in other cultures can lead to a more productive perspective on our own behaviour so too a study of the cosmologies of other times and places can enable us recognise elements of our own cosmology that might otherwise pass as inevitable developments. Apart from modern natural science therefore this volume incorporates brief treatments of Native American Cave Dweller Chinese Egyptian Islamic Megalithic Mesopotamian Greek Medieval and Copernican cosmology leading to an appreciation of cosmology as an intellectual creation not merely a collection of facts. It is a valuable reference tool for any student or academic with an interest in the history of science and cosmology specifically.

Galileo's Daughter Dava Sobel, 2009-05-26 Inspired by a long fascination with Galileo and by the remarkable surviving letters of Galileo's daughter a cloistered nun Dava Sobel has written a biography unlike any other of the man Albert Einstein called the father of modern physics indeed of modern science altogether. Galileo's Daughter also presents a stunning portrait of a person hitherto lost to history described by her father as a woman of exquisite mind singular goodness and most tenderly attached to me. Galileo's Daughter dramatically recolors the personality and accomplishment of a mythic figure whose seventeenth century clash with Catholic doctrine continues to define the schism between science and religion. Moving between Galileo's grand public life and Maria Celeste's sequestered world Sobel illuminates the Florence of the Medicis and the papal court in Rome during the pivotal era when humanity's perception of its place in the cosmos was about to be overturned. In that same time while the bubonic plague wreaked its terrible devastation and the Thirty Years War tipped fortunes across Europe one man sought to reconcile the Heaven he revered as a good Catholic with the heavens he revealed through his telescope. With all the human drama and scientific adventure that distinguished Dava Sobel's previous book Longitude Galileo's Daughter is an unforgettable story.

Science and Technology in World History, Volume 3 David Deming, 2014-01-10 This installment in a series on science and technology in world history begins in the fourteenth century explaining the origin and nature of scientific methodology and the relation of science to religion philosophy military history economics and technology. Specific topics covered include the Black Death the Little Ice Age the invention of the printing press Martin Luther and the Reformation the birth of modern medicine the Copernican Revolution Galileo Kepler Isaac Newton and the Scientific Revolution.

Four Treatises for the Reconsideration of the History of Science Fabio Farina, 2003 Was Isaac Newton considered by many to be the most important scientist of all time actually a mystical occultist? Was Galileo often viewed as science's greatest voice of reason to blame for his conflict with the Catholic Church? Four

Treatises for the Reconsideration of the History of Science examines these and other momentous episodes in the history of science by shedding light on some of the more prevalent misconceptions regarding our views concerning the genesis of science Historian and freelance writer Fabio J A Farina provides an excellent academic introduction to four important case studies necessary for understanding the historical contexts that have influenced science His arguments show that there is a far more complex interplay of issues ideologies and philosophies rather than the simple rationalist evolution as many may view it today The many interesting concepts and viewpoints presented in this small yet invaluable collection will undoubtedly fuel interest for further research and future discussions *Proceedings, American Philosophical Society (vol. 140, No. 3, 1996)* , **Jonathan Edwards's Philosophy of Nature** Avihu Zakai,2010-07-22 [Shakespeare's Theater of Nature](#) Aaron Kitch,2025-03-06 Shakespeare's Theater of Nature argues that Shakespeare combined art and nature in new ways while experimenting with relations between words images and objects as sources of knowledge and pleasure Shakespeare's re-centering of nature as a source of theatrical representation in a range of plays follows debates in natural philosophy and theology about how to understand divinity in and through the order of nature ordo creationis Early chapters analyze early modern reframing of nature by printed books of botany cosmology and history as well Tudor interludes that center nature as a subject while later chapters offer readings of eight plays by Shakespeare that draw on classical medieval and early modern debates in natural philosophy and theology to create new modes of dramatic mimesis **Physics, Cosmology and Astronomy, 1300-1700: Tension and Accommodation** Sabetai Unguru,2012-12-06 Habent sua Jata colloquia The present volume has its origins in a spring 1984 international workshop held under the auspices of the Israel Academy of Sciences and Humanities by The Institute for the History and Philosophy of Science and Ideas of Tel Aviv University in cooperation with The Van Leer Jerusalem Foundation It contains twelve of the twenty papers presented at the workshop by the twenty six participants As Proceedings of conferences go it is a good representative of the genre sharing in the main characteristics of its ilk It may even be one of the rare instances of a book of Proceedings whose descriptive title applies equally well to the workshop's topic and to the interrelations between the various papers it includes Tension and Accommodation are the key words Thus while John Glucker's paper Images of Plato in Late Antiquity raises by means of the Platonic example the problem of interpretation of ancient texts suggesting the assignment of proper weight to the creator of the tradition and not only to his many later interpreters in assessing the proper relationship between originator and commentators Abraham Wasserstein's Hunches that did not come off Some Problems in Greek Science illustrates the long lived Whiggish tradition in the history of science and mathematics As those familiar with my work will undoubtedly note Wasserstein's position is far removed from my stance on ancient Greek mathematics *Vermeer and Plato* Robert D. Discipline and Experience Peter

Dear, 2009-05-13 Although the Scientific Revolution has long been regarded as the beginning of modern science there has been little consensus about its true character. While the application of mathematics to the study of the natural world has always been recognized as an important factor, the role of experiment has been less clearly understood. Peter Dear investigates the nature of the change that occurred during this period, focusing particular attention on evolving notions of experience and how these developed into the experimental work that is at the center of modern science. He examines seventeenth century mathematical sciences, astronomy, optics, and mechanics not as abstract ideas but as vital enterprises that involved practices related to both experience and experiment. Dear illuminates how mathematicians and natural philosophers of the period, Mersenne, Descartes, Pascal, Barrow, Newton, Boyle, and the Jesuits, used experience in their argumentation and how and why these approaches changed over the course of a century. Drawing on mathematical texts and works of natural philosophy from all over Europe, he describes a process of change that was gradual, halting, sometimes contradictory, far from the sharp break with intellectual tradition implied by the term revolution.
