The Theory and Practice of Experimental Philosophy Justin Sytsma, Jonathan Livengood, 2015-11-27. In recent years, developments in experimental philosophy have led many thinkers to reconsider their central assumptions and methods. It is not enough to speculate and introspect; from the armchair, philosophers must subject their claims to scientific scrutiny, looking at evidence and in some cases conducting new empirical research. *The Theory and Practice of Experimental Philosophy* is an introduction and guide to the systematic collection and analysis of empirical data in academic philosophy. This book serves two purposes: first, it examines the theory behind χ phi, including its underlying motivations and the objections that have been leveled against it. Second, the book offers a practical guide for those interested in doing experimental philosophy, detailing how to design, implement and analyze empirical studies. Thus, the book explains the reasoning behind χ phi and provides tools to help readers become experimental philosophers.

Maltese Przemyslaw Turek, Julia Nintemann, 2022-04-04. This volume features nine articles covering various aspects of Maltese linguistics. Part I, mostly dedicated to the Maltese lexicon, opens with Bednarowicz's comparison of Maltese and Arabic adjectives. Fabri then categorizes various types of constructions involving the preposition *ta*. The paper by Lucas and Spagnol discusses Maltese words containing an innovative final *n*. Part II deals with the syntax of Maltese. Azzopardi's paper focuses on a construction in Maltese which consists of a sequence of two or more finite verbs. Just and Pl present the first corpus-based study of differential object indexing in Maltese. In Part III on morphosyntax, Turek analyzes Arabic prepositions in Classical Modern

migration and language variation **Perspectives on information structure in Austronesian languages** Sonja Riesberg, Asako Shiohara, Atsuko Utsumi, 2018 Information structure is a relatively new field to linguistics and has only recently been studied for smaller and less described languages. This book is the first of its kind that brings together contributions on information structure in Austronesian languages. Current approaches from formal semantics, discourse studies and intonational phonology are brought together with language specific and cross linguistic expertise of Austronesian languages. The 13 chapters in this volume cover all subgroups of the large Austronesian family including Formosan, Central Malayo Polynesian, South Halmahera, West New Guinea and Oceanic. The major focus though lies on Western Malayo Polynesian languages. Some chapters investigate two of the largest languages in the region, Tagalog and different varieties of Malay, others study information structural phenomena in small underdescribed languages. The three overarching topics that are covered in this book are NP marking and reference tracking devices, syntactic structures and information structural categories and the interaction of information structure and prosody. Various data types build the basis for the different studies compiled in this book. Some chapters investigate written texts such as modern novels (cf. Djenar's chapter on modern standard Indonesian) or compare different text genres such as, for example, oral narratives and translations of biblical narratives (cf. De Busser's chapter on Bunun). Most contributions however study natural spoken speech and make use of spoken corpora which have been compiled by the authors themselves. The volume comprises a number of different methods and theoretical frameworks. Two chapters make use of the Question Under Discussion approach developed in formal semantics (cf. the chapters by Latrouite, Shiohara, Riester, Riesberg et al.). They apply the recently developed method of Rapid Prosody Transcription (RPT) to investigate native speakers' perception of prosodic prominences and boundaries in Papuan Malay. Other papers discuss theoretical consequences of their findings. Thus, for example, Himmelmann takes apart the most widespread framework for intonational phonology, ToBI, and argues that the analysis of Indonesian languages requires much simpler assumptions than the ones underlying the standard model. Arka Sedeng asks the question how fine grained information structure space should be conceptualized and modelled (e.g. in LFG). Schnell argues that elements that could be analysed as topic and focus categories should better be described in terms of packaging and do not necessarily reflect any pragmatic roles in the first place. Linguistic Variation and Social Practices of Normative Masculinity Fergus O'Dwyer, 2020-03-16

The Oxford Handbook of Experimental Syntax Jon Sprouse, 2023-05-23 This volume showcases the contributions that formal experimental methods can make to syntactic research in the 21st century Syntactic theory is both a domain of study in its own right and one component of an integrated theory of the cognitive neuroscience of language It provides a theory of the mediation between sound and meaning a theory of the representations constructed during sentence processing and a theory of the end state for language acquisition Given the highly interactive nature of the theory of syntax this volume defines experimental syntax in the broadest possible terms exploring both formal experimental methods that have been part of the domain of syntax since its inception i.e. acceptability judgment methods and formal experimental methods that have arisen through the interaction of syntactic theory with the domains of acquisition psycholinguistics and neurolinguistics The Oxford Handbook of Experimental Syntax brings these methods together into a single experimental syntax volume for the first time providing high level reviews of major experimental work offering guidance for researchers looking to incorporate these diverse methods into their own work and inspiring new research that will push the boundaries of the theory of syntax It will appeal to students and scholars from the advanced undergraduate level upwards in a range of fields including syntax acquisition psycholinguistics neurolinguistics and computational linguistics
