Montgomery, 2019-11 There are several textbooks covering material in design of experiments DOE It is a fair question then to ask Why write another DOE textbook One answer is based on the observation that in 2018 over a quarter of the DOE courses taught at the university level rely on course notes rather than a text We view this as an evidence of pent up demand for a different kind of textbook than is currently available A characteristic of many DOE textbooks is that they focus as much or more on analysis than on design A student might get the impression that there is only one appropriate design for any scenario and this design should be orthogonal Orthogonal designs have the desirable feature that the analysis of the data generated after running the experiment is less demanding than the analysis of observational data **Design and Analysis**

Design of Experiments Bradley Jones, Douglas C. Montgomery, 2019-12-12
Design of Experiments: A Modern Approach introduces readers to planning and conducting experiments, analyzing the resulting data, and obtaining valid and objective conclusions. This innovative textbook uses design optimization as its design construction approach, focusing on practical experiments in engineering science and business rather than orthogonal designs and extensive analysis. Requiring only first course knowledge of statistics and familiarity with matrix algebra, student-friendly chapters cover the design process for a range of various types of experiments. The text follows a traditional outline for a design of experiments course, beginning with an introduction to the topic, historical notes, a review of fundamental statistics concepts, and a systematic process for designing and conducting experiments. Subsequent chapters cover simple comparative experiments, variance analysis, two-factor factorial experiments, randomized complete block design, response surface methodology, designs for nonlinear models, and more. Readers gain a solid understanding of the role of experimentation in technology commercialization and product realization activities, including new product design, manufacturing process development, and process improvement, as well as many applications of designed experiments in other areas such as marketing, service operations, e-commerce, and general business operations.
