Detection of Explosives and Landmines Hiltmar Schubert, Andrey Kuznetsov, 2012-12-06 This ARW is the third NATO sponsored workshop on Explosives Detection and Humanitarian Demining The previous events were Detection and Destruction of Anti Personnel Landmines Moscow 1997 Explosives Detection and Decontamination of the Environment Prague 1997 Over the last decade applied research in Humanitarian Demining has made progress to some extent but according to the tremendous tasks of Demining and the lack of scientific methods for practical detection of explosive devices research activities are still of the same importance than ever before Concerning countermeasures against terrorism the detection of explosives is one of the key factors but the practical applications are not sufficient solved An international exchange of research results are therefore urgent to find out the most promising measures for application The coincidence of this ARW and the terrible disaster of New York and Washington may demonstrate the importance of this task In consequence the explosive device detection technologies can make a major contribution to collective family and individual security In developed countries these technologies provide a strong deterrent and preventative measure against terrorist threats In less developed regions they can improve individual institutional and state security lessening the insecurity that motivates many terrorists acts The elimination of landmine threats is just one of many ways of achieving this However our attempts to meet the extremely difficult technical challenges posed by landmine and UXO contamination are inevitably leading us to new technological approaches

Counterterrorist Detection Techniques of Explosives Jehuda Yinon, 2011-10-13 The detection of hidden explosives has become an issue of utmost importance in recent years While terrorism is not new to the international community recent terrorist attacks have raised the issue of detection of explosives and have generated a great demand for rapid sensitive and reliable methods for detecting hidden explosives Counterterrorist Detection Techniques of Explosives covers recent advances in this area of research including vapor and trace detection techniques chemiluminescence mass spectrometry ion mobility spectrometry electrochemical methods and micromechanical sensors such as microcantilevers and bulk detection techniques neutron techniques nuclear quadrupole resonance x ray diffraction imaging millimeter wave imaging terahertz imaging and laser techniques This book will be of

Forensic and Environmental Detection of Explosives Jehuda Yinon, 1999-09-09 Forensic and Environmental Detection of Explosives is the first comprehensive book on the detection of explosives It combines the two main fields of application Forensic detection of explosives the detection of hidden explosives in airfreight luggage vehicles and on suspects Environmental detection of explosives detecting on site explosives in soil and water of contaminated areas and the detection of landmines Dr Jehuda Yinon is a world renowned expert on the analysis of explosives and has served as consulting expert during the Oklahoma bombing trial where his previous book Modern Methods and Applications in Analysis of Explosives was quoted by both the prosecution and defense experts This new book complements the author s previous book on the analysis of explosives It includes the following features Classifications of explosives Explanations of the basic terms related to the detection of explosives Vapor detection methods Probing radiation methods Tagging of explosives Systems integration and performance testing Detection of explosives in contaminated areas Detection of landmines This book is an ideal reference book for those working in forensic and law enforcement agencies concerned with the detection of hidden explosives as well as for environmental scientists dealing with explosives decontamination The book is also recommended as a text book for graduate students in analytical environmental and forensic science

Vapour and Trace Detection of Explosives for Anti-Terrorism Purposes M. Krausa, 2012-11-06 The fast detection of explosives from the vapor phase would be one way to enhance the protection of society against terrorist attacks Up to now the problem of detection of explosives especially the location of explosives whether at large areas e g station halls theaters or hidden in cars aircraft cargo baggage or explosives hidden in crowds e g suicide bombers or bombs in bags has not been solved Smelling of explosives like dogs do seems to be a valuable tool for a security chain In general different strategies can be adopt to the basic problem of explosive detection bulk detection vapor detection Normally meetings cover both aspects and applications of the detection Even though both methods might fulfill special aspects of a general security chain the underlying scientific questions differ strongly Because of that the discussions of the scientists and practitioners from the different main directions are sometimes only less specific Therefore the NATO Advisory Panel in Security Related Civil Science and Technology proposed a small series of NATO ARW s which focuses on the different scientific aspects of explosives detection methods This book is based on material presented at the first NATO ARW of this series in Moscow which covered the topic Vapor and trace detection of explosives The second ARW was held in St Petersburg and treated the topic Bulk detection methods The third workshop was held in Warwick and focused on electronic noses which cover a somewhat different aspect of vapor detection

Unexploded Ordnance Detection and Mitigation James Byrnes, 2009-01-12 The chapters in this volume were presented at the July August 2008 NATO Advanced Study Institute on Unexploded Ordnance Detection and Mitigation The conference was held at the beautiful Il Ciocco resort near Lucca in the glorious Tuscany region of northern Italy For the ninth time we gathered at this idyllic spot to explore and

extend the reciprocity between mathematics and engineering The dynamic interaction between world renowned scientists from the usually disparate communities of pure mathematicians and applied scientists which occurred at our eight previous ASI s continued at this meeting The detection and neutralization of unexploded ordnance UXO has been of major concern for very many decades at least since the First World war UXO continues to be the subject of intensive research in many elds of science incl ing mathematics signal processing mainly radar and sonar and chemistry While today s headlines emphasize the mayhem resulting from the placement of imp vised explosive devices IEDs humanitarian landmine clearing continues to draw signi cant global attention as well In many countries of the world landmines threaten the population and hinder reconstruction and fast ef cient utilization of large areas of the mined land in the aftermath of military con icts

Counterterrorist Detection Techniques of Explosives Avi Kagan,Jimmie C. Oxley,2021-12-03 Counterterrorist Detection Techniques of Explosives Second Edition covers the most current techniques available for explosive detection This completely revised volume describes the most updated research findings that will be used in the next generation of explosives detection technologies New editors Drs Avi Cagan and Jimmie Oxley have assembled in one volume a series of detection technologies written by an expert group of scientists The book helps researchers to compare the advantages and disadvantages of all available methods in detecting explosives and in effect allows them to choose the correct instrumental screening technology according to the nature of the sample Covers bulk remote trace contact or contact less detection Describes techniques applicable to indoor public transportation human and freight and outdoor vehicle detection Reviews both current techniques and those in advanced stages of development Provides detailed descriptions of every technique including its principles of operation as well as its applications in the detection of explosives **Stand-off Detection of**

Suicide Bombers and Mobile Subjects Hiltmar Schubert,A. Rimski-Korsakov,2006-09-22 This book is derived from lectures at an international NATO Russian Advanced Research Workshop on the Stand off Detection of concealed explosives carried by suicide bombers or in vehicles Ideally explosives should be detected by harmless methods at a distance and unknown to the persons under inspection The aim is to devise sensing techniques that will allow the shortest developing time sufficient to start commercial production Short time availability is a prioritizing issuse **Field Detection Technologies**

for Explosives Yin Sun,2010 Field Detection Technologies For Explosives Explosives are historically the weapons that have been most frequently used against civilians by terrorist organisations In the past few years the use of explosives by terrorist groups has cost the lives of more people than the combination of all other attacks including the use of weapons of mass destruction chemical biological and nuclear weapons Early detection of these substances is one of the most effective ways to prevent attacks using explosives from occurring Fast and reliable equipment to detect the presence of explosives and explosive devices is critical to fighting terrorism Written in a style that makes complicated technologies easy to understand this book covers the principles instrumentation and applications of current technologies used to detect explosives in the field

Both trace detection technologies and bulk detection technologies are discussed. The section on trace detection technologies includes chapters on ion mobility spectrometry, piezoelectric sensors, chemiluminescence based detectors, polymer based technologies and mass spectrometry. It also discusses detection requirements, methodologies used for detector evaluation and sampling technologies. The section on bulk detection contains chapters on x-ray, millimeter wave imaging, neutron and nuclear quadrupole resonance technologies. This volume introduces the basic concepts of commonly used explosives detection technologies and is an essential resource for novice or more experienced personnel working in the explosives detection field as well as those with a general interest in this important subject. Features: Discusses all aspects of commonly used field detection technologies. Reviews detection requirements and explosives sampling methods. Describes specific instruments used for field detection applications such as at airports, harbours and border crossings. Includes a summary of common explosives and their important properties for easy reference. Provides an introduction to data fusion and receiver operating characteristic methods, both of which have recently received significant attention in the field of explosives detection. Book jacket

Vapour and Trace Detection of Explosives for Anti-Terrorism Purposes M Krausa, 2004-10-18. Up to now so called sniffer dogs are the most successful and widespread systems for the explosives detection at airports and in public areas. Dogs are able to detect explosives under various conditions. On the other hand dogs are living beings and their behavior and skills are influenced by numerous parameters e.g. age, sex, trainer, daily condition etc. To overcome these problems concerning the detection of explosives and illicit substances by dogs, chemical sensors seemed to be a valuable alternative for this application and therefore a valuable tool in counter terrorism. The presented papers are an outcome of an NATO ARW which was held in Moscow and cover different aspects of vapour and trace detection of explosive. Starting from different scenarios: airport security inspection of large areas, freight screening, boarding passes etc. and taking into account the capability of dogs, the chances of and demands on chemical sensors are discussed in view of their possible application. Several papers highlight the capability and possibilities of different methods and devices for the vapour detection of explosives: drift MS, high speed gas analyzers, ion mobility increment spectrometer etc. Information about the post explosion identification of explosives by LC-MS and the development of explosive standards for dog training and sensor testing are presented also.

Trace Chemical Sensing of Explosives Ronald L. Woodfin, 2007-03-15. This timely book covers the most recent developments in the chemical detection of explosives in a variety of environments. Beginning with a broad view of the need for and the potential applications of chemical sensing, the book considers the issue of how to effectively include chemical sensing into systems designed to find hidden explosives devices. Offering a firsthand look at the latest technologies direct from those who are actively developing them, the book features: A look at the history of the field including the contributions of recent programs. A brief explanation of the chemistry of various explosives and differences in the place where they may be detected. An introduction to the problems presented by trace element sensing. An overview and

comparison of the technologies currently being used and developed Case studies of field experiences with chemical sensors A look at the emerging threat of non traditional explosives This book is an important reference for explosives engineers systems engineers involved in the development of related devices government agencies and NGOs involved in demining efforts military and law enforcement specialists in mines and explosive ordinance disposal EOD as well as environmental scientists and chemists involved in explosives research In addition to providing field workers with knowledge that will help them decide where and how to search for explosives using chemical sensors It will provide them with an understanding of the potential and the limitations of chemical sensing in their search for and identification of dangerous devices
