Statistical Image Processing and Multidimensional Modeling Paul Fieguth, 2010-10-17 Images are all around us The proliferation of low cost high quality imaging devices has led to an explosion in acquired images When these images are acquired from a microscope telescope satellite or medical imaging device there is a statistical image processing task the inference of something an artery a road a DNA marker an oil spill from imagery possibly noisy blurry or incomplete A great many textbooks have been written on image processing However this book does not so much focus on images per se but rather on spatial data sets with one or more measurements taken over a two or higher dimensional space and to which standard image processing algorithms may not apply There are many important data analysis methods developed in this text for such statistical image problems Examples abound throughout remote sensing satellite data mapping data assimilation climate change studies land use medical imaging organ segmentation anomaly detection computer vision image classification segmentation and other 2D 3D problems biological imaging porous media The goal then of this text is to address methods for solving multidimensional statistical problems The text strikes a balance between mathematics and theory on the one hand versus applications and algorithms on the other by deliberately developing the basic theory Part I the mathematical modeling Part II and the algorithmic and numerical methods Part III of solving a given problem The particular emphases of the book include inverse problems multidimensional modeling random fields and hierarchical methods
