of the Circulation of Ceramics in Cyprus from the 3rd Century BC to the 3rd Century AD John Lund, 2015-10-26 This is the first monograph devoted solely to the ceramics of Cyprus in the Hellenistic and Roman Periods. The island was by then no longer divided into kingdoms but unified politically first under Ptolemaic Egypt and later as a province in the Roman Empire. Submission to foreign rule was previously thought to have diluted if not obliterated the time honoured distinctive Cypriot character. The ceramic evidence suggests otherwise. The distribution of local and imported pottery in Cyprus points to the existence of several regional exchange networks, a division that also seems reflected by other evidence. The similarities in material culture, exchange patterns and preferential practices are suggestive of a certain level of regional collective self awareness. From the 1st century BC onwards Cyprus became increasingly engulfed by mass produced and standardized ceramic fine wares which seem ultimately to have put many of the indigenous makers of similar products out of business or forced them to modify their output. Also the ceramic record gradually became less diverse during the Roman Period than before developments which we today might be inclined to view as symptoms of an early form of globalisation.

Smart Grid in IoT-Enabled Spaces Fadi Al-Turjman, 2020-10-05 Internet of Things (IoT) enabled spaces have made revolutionary advances in the utility grid. Among these advances intelligent and energy efficient services are gaining considerable interest. The use of the smart grid is increasing day after day around us and is not only used in saving energy but also in our daily life for intelligent health traffic and even farming systems. The grid enabled with IoT features is also expected to communicate with cellular networks smoothly in the next generation networks 6G and beyond. This will open the door for other interesting research areas. In this book we consider the most significant and emergent research topics in this domain addressing major issues and challenges in IoT based solutions proposed for the smart grid. The chapters provide insight on comprehensive topics in IoT based smart grids combining technical aspects with the most up to date theory. It investigates the grid under varying and potential emerging paradigms such as edge fog computing in addition to big data aspects considerations in the IoT era. With comprehensive surveys and case studies this book explores basic and high level grid aspects in the emerging smart city paradigm which makes it especially attractive to researchers, academics and higher level students. This authored book can be used by computer science undergraduate and postgraduate students, researchers and practitioners, city administrators, policymakers and government regulators.
