Programming Languages and Systems S. Doaitse Swierstra, 2003-07-31 This is the second time that of ESOP has formed part of the ETAPS cluster of conferences workshops working group meetings and other associated activities One of the

results of colocating so many conferences is a reduction in the number of possibilities to submit a paper to a European conference and the increased competition between conferences that occurs when boundaries between individual conferences have not yet become well established. This may have been the reason for the fact that only 44 submissions were received this year. On the other hand, we feel that the average quality of submissions has gone up and thus the program committee was able to select 18 good papers, only one less than the year before. The program committee did not meet physically and all discussion was done using a Web-driven database system. Despite some mixed feelings, there is an overall tendency to appreciate the extra time available for giving papers a second look and really going into comments made by other program committee members. I want to thank my fellow program committee members for the work they have put into the refereeing process and the valuable feedback they have given to authors. I want to thank the referees for their work and many detailed comments and finally I want to thank everyone who has submitted a paper without authors' notice.

Contemporary Knowledge Engineering and Cognition Franz Schmalhofer, Gerhard Strube, 1992-08-12. This book has its source in the question of whether any knowledge engineering tools can be applied or analyzed in cognition research and what insights and methods of cognitive science might be relevant for knowledge engineers. It presents the proceedings of a workshop organized by the Special Interest Groups Cognition and Knowledge Engineering of the German Society for Informatics held in February 1992 in Kaiserslautern. The book is structured into three parts. The first part contrasts work in knowledge engineering with approaches from the side of the soft sciences. The second part deals with case-based approaches in expert systems. Cognition research and the cognitive adequacy of expert systems are discussed in the third part. Contributions from Canada, England, France, Switzerland, and the USA demonstrate how knowledge engineering and cognitive science are woven together internationally.

Managing Multimedia Semantics Srinivasan, Uma, Nepal, Surya, 2005-02-28. This book is aimed at researchers and practitioners involved in designing and managing complex multimedia information systems. Provided by publisher.

Four Short Courses on Harmonic Analysis Brigitte Forster, Peter Robert Massopust, 2010. Written by internationally renowned mathematicians, this state-of-the-art textbook examines four research directions in harmonic analysis and features some of the latest applications in the field. The work is the first one that combines spline theory, wavelets, frames, and time-frequency methods, leading up to a construction of wavelets on manifolds other than $\mathbb{R}^n$. **Four Short Courses on Harmonic Analysis** is intended as a graduate-level textbook for courses or seminars on harmonic analysis and its applications. The work is also an excellent reference or self-study guide for researchers and practitioners with diverse mathematical backgrounds working in different fields such as pure and applied mathematics, image and signal processing, engineering, mathematical physics, and communication theory.
