At Home in the Universe Stuart Kauffman, 1995 This exciting exploration into the nature of life brilliantly weaves together the excitement of intellectual discovery and a fertile mix of insights to give the general reader a fascinating look at the new science of complexity and at the forces for order that lie at the edge of chaos An important new argument Carl Sagan The Washington Post 59 illustrations *Systems Science and Cybernetics - Volume I* Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational

perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

The Oxford Handbook of the New Private Law Andrew S. Gold, John C.P. Goldberg, Daniel B. Kelly, Emily Sherwin, Henry E. Smith, 2020-10-27 The Oxford Handbook of the New Private Law reflects exciting developments in scholarship dedicated to reinvigorating the study of the broad field of private law This field embraces the traditional common law subjects property contracts and torts as well as adjacent more statutory areas such as intellectual property and commercial law It also includes important areas that have been neglected in the United States but are beginning to make a comeback These include unjust enrichment restitution equity and remedies more generally Private law can also mean private law as a whole which invites consideration of issues such as the public private distinction the similarities and differences between the various areas of private law and the institutional framework supporting private law including courts arbitrators and even custom The New Private Law is an approach to these subjects that aims to bring a new outlook to the study of private law by moving beyond reductively instrumentalist policy evaluation and narrow rule by rule doctrine by doctrine analysis so as to consider and capture how private law s various features fit and work together as well as the normative underpinnings of these larger structures This movement has begun resuscitating the notion of private law itself in the United States and has brought an interdisciplinary perspective to the more traditional doctrinal approach prevalent in Commonwealth countries The Handbook embraces a broad range of perspectives to private law including philosophical economic historical and psychological to name a few yet it offers a unifying theme of seriousness about the structure and content of private law It will be an essential resource for legal scholars interested in the future of this important field

Foreign in a Domestic Sense Christina Duffy Burnett, Burke Marshall, 2001-07-20 A number of leading legal scholars address different aspects of the American experience of territorial government in areas unincorporated for reasons of geography and the cultural and racial makeup of their peoples with special emphasis on the status of P

Water in the Universe Arnold Hanslmeier, 2010-09-29 Due to its specific chemical and physical properties water is essential for life on Earth And it is assumed that this would be the case for extraterrestrial life as well Therefore it is important to investigate

where water can be found in the Universe Although there are places that are completely dry places where the last rainfall happened probably several 100 million years ago surprisingly this substance is quite omnipresent In the outer solar system the large satellites of Jupiter and Saturn are covered by a thick layer of ice that could be hiding a liquid ocean below This of course brings up the question of whether the recently detected extrasolar planets could have some water on their surfaces and how we can detect this Water molecules are also found in interstellar gas and dust clouds This book begins with an introductory chapter reviewing the physical and chemical properties of water Then it illuminates the apparent connection between water and life This is followed by chapters dealing with our current knowledge of water in the solar system followed by a discussion concerning the potential presence and possible detection of water on exoplanets The signature of water in interstellar space and stars are reviewed before the origin of water in the Universe is finally discussed The book ends with an appendix on detection methods satellite missions and astrophysical concepts touched upon in the main parts of the book The search for water in the Universe is related to the search for extraterrestrial life and is of fundamental importance for astrophysics astrobiology and other related topics This book therefore addresses students and researchers in these fields

The Ingenuity Gap Thomas Homer-Dixon, 2002-08-13 Despite all of society's advances our problems proliferate Wars abound environmental degradation accelerates economies topple overnight and pandemics such as AIDS and tuberculosis continue to spread The Internet and other media help to disseminate knowledge but they've also created an info glut and left us too little time to process it What's more advances in technology have made the world so bewilderingly fast paced and complex that fewer people are able even to grasp the problems let alone generate solutions That space between the problems that arise and our ability to solve them is the ingenuity gap and as we careen towards an increasingly harried and hectic future the gap seems only to widen As he explores the possible consequences of this gap Thomas Homer Dixon offers an absorbing assessment of the state of the world and our ability to fix it Culling from an astounding array of fields from economics to evolution political science to paleontology computers to communications he integrates his vast knowledge into an accessible and engaging argument This is a book with profound implications for everyone that we can ill afford to ignore

Being as Communion William A. Dembski, 2016-04-15 For a thing to be real it must be able to communicate with other things If this is so then the problem of being receives a straightforward resolution to be is to be in communion So the fundamental science indeed the science that needs to underwrite all other sciences is a theory of communication Within such a theory of communication the proper object of study becomes not isolated particles but the information that passes between entities In *Being as Communion* philosopher and mathematician William Dembski provides a non technical overview of his work on information Dembski attempts to make good on the promise of John Wheeler Paul Davies and others that information is poised to replace matter as the primary stuff of reality With profound implications for theology and metaphysics *Being as Communion* develops a relational ontology that is at once congenial to science and open to teleology in nature All those

The Global Imperative Robert P. Clark, 2018-02-12 Robert Clark delves into 100 millennia of human history to create a unified and consistent explanation for humankind's inner need to spread itself across the globe. He examines key events from different eras such as the voyages of the Chinese treasure fleet, the shaping of the Aztec's trade system in MesoAmerica, the role of steam-powered transport in the supply of an English city, the rise of the gas-powered engine and the digitization of information in the computer age, melding them together to form a framework for understanding the process of globalization. Drawing on a variety of academic disciplines including the physical sciences, biology, anthropology, geography, economics, political science, sociology and demography, Clark reveals the spread of humans and their cultures to be part of an ongoing struggle to supply the energy needs of an increasingly large and complex society. Entropy and thermodynamics, terms often ignored or misunderstood by social science students, clearly frame a fascinating vision of humankind's inherent tendency toward a globalized world. Although human expansion has drawn increasing attention in the last several decades as this tumultuous century has progressed, Clark shows that the process of globalization is not a recent concept. From the very roots of the species, humankind has been driven by a range of internal and external factors to expand in order to survive the increasing complexity of human civilization.

God and the Cosmos Harry Lee Poe, Jimmy H. Davis, 2012-02-16

Theologian Harry Lee Poe and chemist Jimmy H Davis argue that God's interaction with our world is a possibility affirmed equally by the Bible and the contemporary scientific record Rather than confirming that the cosmos is closed to the actions of the divine advancing scientific knowledge seems to indicate that the nature of the universe is actually open to the unique type of divine activity portrayed in the Bible

Irreligion John Allen Paulos, 2007-12-26 A lifelong unbeliever finds no reason to change his mind A good natured primer for infidels from the bestselling author of Innumeracy Kirkus Reviews Are there any logical reasons to believe in God Mathematician and bestselling author John Allen Paulos thinks not In Irreligion he presents the case for his own worldview organizing his book into twelve chapters that refute the twelve arguments most often put forward for believing in God's existence The latter arguments Paulos relates in his characteristically lighthearted style range from what might be called golden oldies to those with a more contemporary beat On the playlist are the first cause argument the argument from design the ontological argument arguments from faith and biblical codes the argument from the anthropic principle the moral universality argument and others Interspersed among his twelve counterarguments are remarks on a variety of irreligious themes ranging from the nature of miracles and creationist probability to cognitive illusions and prudential wagers Special attention is paid to topics arguments and questions that spring from his incredulity not only about religion but also about others credulity Despite the strong influence of his day job Paulos says there isn't a single mathematical formula in the book He's done it again John Allen Paulos has written a charming book that takes you on a sojourn of flawless logic with simple and clear examples drawn from math science and pop culture At journey's end Paulos has left you with plenty to think about whether you are religious irreligious or anything in between Neil deGrasse Tyson

Captured by Aliens Joel Achenbach, 2003 The great minds of the human race employing ever more fabulous technology have peered into the depths of space and discovered that we exist on a tiny speck in a universe that is vast beyond comprehension But there is one thing we have yet to discover a single scrap of extraterrestrial life We have heard no signals found no alien picnic trash The aliens who allegedly abduct people in the middle of the night have a strange way of evaporating in the harsh glare of scientific scrutiny And so at the turn of the millennium we are in an intellectual fix we know the universe only through its structure its physical properties its chemistry Of its biology we can only guess Are there creatures out there like us with big brains and restless spirits Or are we for all intents and purposes alone If aliens exist if there really are intelligent creatures zooming around the galaxy then where in the nation are they Washington Post reporter

Joel Achenbach the author of *Why Things Are* and a commentator for National Public Radio puts the ET debate into the context of the space program discoveries in astronomy and the hunger for meaning and spiritual nourishment in an era when science often doesn't provide the answers that people desire. He finds that the topic of extraterrestrial life is poisoned by wishful thinking by the natural human yearning to make contact with our brothers and sisters in space. But he also finds some fascinating, admirable and maddening characters who have pursued the truth about extraterrestrial life: Carl Sagan, the brilliant astronomer who brought the cosmos to the masses; Dan Goldin, the cantankerous head of NASA who still believes in the dream of the Space Age; Henry Harris, a former Las Vegas lounge singer who is assigned the job of figuring out how to get a spaceship to Alpha Centauri; and various and sundry ufologists, experiencers, spiritualists and channelers for whom the aliens are an ever-present reality. In this fascinating, funny and spirited book, Achenbach discovers that the search for life elsewhere leads us on a looping road back to the fundamental questions about life on Earth. To think coherently about extraterrestrial life, we first must come to terms with who we are, why we exist and what it means to carry around in our cells an evolutionary history that took four billion years to unfold. Achenbach's message is that it is a wonderful and thrilling thing to be a sentient human being, a creature capable of foolish romanticism in a universe that is mostly rocks and gas and dust and empty space.

The New Invisible College Caroline S. Wagner, 2009-10-01 The twentieth century was the era of big science. Driven by strategic rivalries and fierce economic competition, wealthy governments invested heavily in national science establishments. Direct funding for institutions like the National Science Foundation and high visibility projects such as the race to the moon fueled innovation, growth and national prestige. But the big science model left poorer countries out in the cold. Today, the organization of science is undergoing a fundamental transformation. In *The New Invisible College*, Caroline Wagner combines quantitative data and extensive interviews to map the emergence of global science networks and trace the dynamics driving their growth. She argues that the shift from big science to global networks creates unprecedented opportunities for developing countries to tap science's potential. Rather than squander resources in vain efforts to mimic the scientific establishments of the twentieth century, developing country governments can leverage networks by creating incentives for top-notch scientists to focus on research that addresses their concerns and by finding ways to tie knowledge to local problem solving. *The New Invisible College* offers both a guidebook and a playbook for policymakers confronting these tasks.

Back To Darwin John B. Cobb, 2008-02-04 This book provides a distinctive, radical way beyond the quarrels between evolutionary science and Christian belief. Leading scientists, philosophers and theologians critically discuss the metaphysical assumptions of neo-Darwinism and offer concrete ways of broadening mainstream evolutionary theory. Their open exchange, moderated by veteran process theologian John B. Cobb, presents a holistic case for evolution that both theists and nontheists can accept. Contributors: Francisco J. Ayala, Ian G. Barbour, Charles Birch, Philip Clayton, John B. Cobb Jr., John Greene, David Ray Griffin, A. Y. Gunter, John F. Haught, Lynn Margulis, Reg Morrison, Dorion Sagan, Jeffrey Schloss, Robert J.
