space industry The sound of freedom: Naval Weapons Technology at Dahlgren, Virginia 1918-2006 James P. Rife, 2006 This book tells the story of the evolution of the Dahlgren Laboratory from a naval proof and test facility into a modern research and development center crucial to the technological evolution of the U S Navy Combining a close analysis of the technical work that led to the improvements in weapons bombsights missiles and the computers that provided their guidance with a close account of changing management styles this work recounts many previously classified stories *Guidance, Control and Docking for CubeSat-based Active Debris Removal* Mohamed Khalil Ben-Larbi, 2023-08-07 While a paradigm shift in space industry has already started involving mass production of higher standardized large distributed systems such as constellations there are no effective solutions existing for the mass removal of satellites Many indicators point to a further increase in the space traffic in Earth orbit in the near future which could imply new dynamics in the evolution of the space debris environment Even in case of diligent compliance with the Inter Agency Space Debris Coordination Committee IADC mitigation guidelines the growth in space traffic complicates its management and drastically increases the probability of accidents and system failures NASA scientist Donald J Kessler proposed a scenario in which the density of objects in low Earth orbit is high enough that collisions between objects could cause a cascade that renders space unusable for many generations Therefore a reliable and affordable capability of removing or servicing non functional objects is essential to guarantee sustainable access to Earth orbit Recently the CubeSat design standard introduced a new class of cost efficient small spacecraft and thereby offers a potential solution to the active debris removal ADR problem The development of a novel CubeSat compatible ADR technology has significant advantages such as the use of commercial off the shelf parts reduced launch cost and reduced design efforts This thesis presents in the frame of an ADR mission an approach to advanced rendezvous and docking with non cooperative targets via CubeSat It covers the design process of simulation systems used for verification purposes the ideation and implementation of novel guidance control and docking techniques as well as their verification and evaluation The outcome of this research is a series of validated software tools processes technical devices and algorithms for automated approach and docking that have been tested in simulation and with prototype hardware
