Don't Tell the Boss! Dmitry Chernov, Didier Sornette, Giovanni Sansavini, Ali Ayoub, 2023-01-20 After a major disaster when investigators are piecing together the story of what happened a striking fact often emerges before disaster struck some people in the organization involved were aware of dangerous conditions that had the potential to escalate to a critical level But for a variety of reasons this crucial information did not reach decision makers So the organization moved ever closer to catastrophe effectively unaware of the possible threat despite the fact that some of its employees could see it coming What is the problem with communication about risk in an organization and why does this problem exist What stops people in organizations or project teams from freely reporting and discussing critical risks This book seeks to answer these questions starting from a deep analysis of 20 disasters where the concealment of risks played a major part These case studies are drawn from around the world and span a range of industries civil nuclear power coal oil and gas production hydropower energy metals and mining space exploration transport finance retail manufacturing and even the response of governments to wars famines and epidemics Together case studies give an insight into why people hesitate to report risks and even when they do why their superiors often prefer to ignore the news The book reviews existing research on the challenges of voice and silence in organizations This helps to explain more generally why people dread passing on bad news to others and why in the workplace they prefer to keep quiet about unpleasant facts or potential risks when they are talking to superiors and colleagues The discussion section of the book includes important examples of concealment within the Chinese state hierarchy as well as by leading epidemiologists and governments in the West during the novel coronavirus outbreak in Wuhan in 2019 2020 The full picture of the very early stage of the COVID 19 pandemic remains unclear and further research is obviously needed to better understand what motivated some municipal provincial and national officials in China as well as Western counterparts to obfuscate facts in their internal communications about many issues associated with the outbreak

Systems Ultra Georgina Voss, 2024-01-23 Systems Ultra explores how we experience complex systems the mesh of things people and ideas interacting to produce their own patterns and behaviours What does it mean when a car which runs on code drives dangerously What does massmarket graphics software tell us about the workplace politics of architects And in these human made systems which phenomena are designed and which are emergent In a world of networked technologies global supply chains and supranational regulations there are growing calls for a new kind of literacy around systems and their ramifications At the same time we are often told these systems are impossible to fully comprehend and are far beyond our control Drawing on field research and artistic practice around the industrial settings of ports air traffic control architectural software payment platforms in adult entertainment and car crash testing Georgina Voss argues that complex systems can be approached as sites of revelation around scale time materiality deviance and breakages With humour and guile she tells the story of what systems have come to mean how they have been sold to us and the real world consequences of the power that flows through them Systems Ultra goes beyond narratives of technological exceptionalism to explore how we experience the complex systems which influence our lives how to understand them more clearly and perhaps how to change them
