Grendler,2021-04-27 A magisterial

and elegantly written study of Renaissance Italy's remarkable accomplishments in higher education and academic research. Choice Winner of the Howard R. Marraro Prize for Italian History from the American Historical Association. Selected by Choice Magazine as an Outstanding Academic Title of the Year. Italian Renaissance universities were Europe's intellectual leaders in humanistic studies, law, medicine, philosophy, and science. Employing some of the foremost scholars of the time, including Pietro Pomponazzi, Andreas Vesalius, and Galileo Galilei, the Italian Renaissance university was the prototype of today's research university. This is the first book in any language to offer a comprehensive study of this most influential institution. Noted scholar Paul F. Grendler offers a detailed and authoritative account of the universities of Renaissance Italy. Beginning with brief narratives of the origins and development of each university, Grendler explores such topics as the number of professors and their distribution by discipline, student enrollment, some estimates are the first attempted, famous faculty members, budgets and salaries, and relations with civil authority. He discusses the timetable of lectures, student living, foreign students, the road to the doctorate, and the impact of the Counter Reformation. He shows in detail how humanism changed research and teaching, producing the medical Renaissance of anatomy and medical botany, new approaches to Aristotle, and mathematical innovation. Universities responded by creating new professorships and suppressing older ones. The book concludes with the decline of Italian universities as internal abuses and external threats, including increased student violence and competition from religious schools, ended Italy's educational leadership in the seventeenth century.

A History of the Medicines We Take Anthony C. Cartwright, N. Anthony Armstrong, 2020-04-30. A fascinating account of poultices, pills, and prescriptions over the centuries and how they've been developed and delivered. This lively account follows the development of medicines from traces of herbs found with the remains of Neanderthal man to prescriptions written on clay tablets from Mesopotamia in the third millennium BC to pure drugs extracted from plants in the nineteenth century and to the latest biotechnology antibody products. In addition, it tells the stories behind historical figures in medicine, such as Christopher Wren, who gave the first intravenous injection in 1656, and William Brockedon, who invented the tablet in 1843, as well as recounting the changes in patterns of prescribing from simple dosage forms such as liquid mixtures, pills, ointments, lotions, poultices, powders for treating wounds, inhalations, eye drops, enemas, pessaries, and suppositories mentioned in the Egyptian Ebers papyrus of 1550 BCE to the complex tablets, injections, and inhalers in current use. A typical pharmacy now dispenses about as many prescriptions in a working day as a mid-nineteenth-century chemist did in a whole year. This history sheds light on the scientific progress made over centuries that led to the medical miracles of the modern world.

Revisiting Premodern Islamic Science and Experience Hannah C. Erlwein, Katja Krause, 2025-01-02. This open access book takes a fresh look at the nature and place of experience in premodern Islamic science. It seeks to answer two questions: What kind of experience constituted premodern Islamic science? And in what ways did that experience constitute science? Answering these questions, the authors critique the trajectory of most existing histories of the period, which tend to reduce experience to

empirical method or practice This view reflects the emphasis that histories of modern science especially of the Scientific Revolution have placed on empiricism the standard against which Islamic actors were then measured This book offers a new historiography arguing that experience had a far wider scope in the world of Islamic science Combining an innovative theoretical framework with three case studies and a reflective epilogue by renowned experts in the field this work offers the history of science a solid foundation on which to build its analyses of premodern science and the modality scope and role of experience therein As a result it speaks to specialists in the history of premodern Islamic science and historians of science in general to reconsider their historiographical assumptions *The Genius of Their Age* S. Representing Infirmary John Henderson, Fredrika Jacobs, Jonathan K. Nelson, 2020-11-17 This volume is the first in depth analysis of how infirm bodies were represented in Italy from c 1400 to 1650 Through original contributions and methodologies it addresses the fundamental yet undiscussed relationship between images and representations in medical religious and literary texts Looking beyond the modern category of disease and viewing infirmity in Galenic humoral terms each chapter explores which infirmities were depicted in visual culture in what context why and when By exploring the works of artists such as Caravaggio Leonardo and Michelangelo this study considers the idealized body altered by diseases including leprosy plague goitre and cancer In doing so the relationship between medical treatment and the depiction of infirmities through miracle cures is also revealed The broad chronological approach demonstrates how and why such representations change both over time and across different forms of media Collectively the chapters explain how the development of knowledge of the workings and structure of the body was reflected in changed ideas and representations of the metaphorical allegorical and symbolic meanings of infirmity and disease The interdisciplinary approach makes this study the perfect resource for both students and specialists of the history of art medicine and religion and social and intellectual history across Renaissance Europe
