Army of None Paul Scharre, 2018-04-24 Winner of the 2019 William E. Colby Award. The book I had been waiting for. I can't recommend it highly enough. Bill Gates: "The era of autonomous weapons has arrived. Today, around the globe, at least thirty nations have weapons that can search for and destroy enemy targets all on their own." Paul Scharre, a leading expert in next-generation warfare, describes these and other high-tech weapons systems, from Israel's Harpy drone to the American submarine-hunting robot ship Sea Hunter, and examines the legal and ethical issues surrounding their use. A smart primer to what's to come in warfare. Bruce Schneier: "Army of None engages military history, global policy, and cutting-edge science to explore the implications of giving weapons the freedom to make life-and-death decisions." A former soldier himself, Scharre argues that we must embrace technology where it can make war more precise and humane, but when the choice is life or death, there is no replacement for the human heart.

Introduction to Radar Target Recognition P. Tait, 2005. This book text provides an overview of the radar target recognition process and covers the key techniques being developed for operational systems. It is based on the fundamental scientific principles of high-resolution radar and explains how the underlying techniques can be used in real systems, taking into account the characteristics of practical radar system designs and component limitations. It also addresses operational aspects such as how high-resolution modes would fit in with other functions such as detection and tracking.

The Effects of Wars Pierre Bocquillon, Suzanne Doyle, Toby S. James, Ra Mason, Soul Park, Matilde Rosina, 2024-12-09. War has been an ever-present feature of human existence. The analysis of wars has tended to focus on either their causes or the military and strategic consequences of a conflict. This book argues that war can have a much wider impact across layers of society that go beyond international boundaries. It presents a heuristic multi-disciplinary framework for analysing the ripple and backwash effects across five connected analytical layers: world material, human capabilities, economic values, belief and attitudes, policy and governance, and power. Through this framework, the book introduces a set of empirically rich and theoretically informed studies which examine the first consequences of the war in Ukraine following the invasion of Russia in February 2022. This

multi disciplinary approach shows that the effects of the war were much deeper and sustained This volume will be of interest to students and scholars of international humanitarian law security studies peace and conflict studies and European history The chapters in this book were originally published as a special issue of Policy Studies

Indefensible Paul Holden,2017-02-15 Although there is often opposition to individual wars most people continue to believe that the arms industry is necessary in some form to safeguard our security provide jobs and stimulate the economy
