

6.092: Assignment 1

In this assignment, you will create a program that computes the distance an object will fall in Earth's gravity.

Part One

1. Create a new class called `GravityCalculator`.
2. Copy and paste the following initial version:

```
class GravityCalculator {
    public static void main(String[] arguments) {
        double gravity = -9.81; // Earth's gravity is m/s^2
        double initialVelocity = 0.0;
        double fallingTime = 10.0;
        double initialPosition = 0.0;
        double finalPosition = 0.0;
        System.out.println("The object's position after " + fallingTime +
            " seconds is " + finalPosition + " m.");
    }
}
```

3. Run it in Eclipse (Run → Run As → Java Application).

What is the output of the unmodified program? Include this as a comment in the source code of your submission.

Part Two

Modify the example program to compute the position of an object after falling for 10 seconds, outputting the position in meters. The formula in Math notation is:

$$x(t) = 0.5 \cdot at^2 + v_1t + x_1$$

Variable	Meaning	Value
a	Acceleration (m/s^2)	-9.81
t	Time (s)	10
v_1	Initial velocity (m/s)	0
x_1	Initial position	0

Note: The correct value is -490.5 m. Java will output more digits after the decimal place, but that is unimportant.

Submission Instructions

Submit your `GravityCalculator.java` Java file via Seelap.

Open Education and Education for Openness ,2019-02-11 The essays in this edited collection reflect on the nature of open education resources where the question on openness for education emerges What is remarkable today are the ways that teachers and institutions now begin to form part of the processes of global exchange and production of a network of global educational commons The question about the significance of this development their limits and the consequences for practitioners and institutions from the perspective of teachers is extremely complex For example the policy agenda of institutions states and international organizations related to the regulation of new technologies facilitates the existence and viability of those resources This has consequences for the ways that those resources are used and produced by educators Contributors to this collection each on their own way argue that Open Education involves a commitment to openness and is therefore inevitably a political and social project This books ends with a challenge for those engaged in exploring the potential impacts and possibilities of open education initiatives The open education paradigm and its consequences for educators and learners speak of an uneven geography where the access to technological infrastructure does not necessarily imply freedom or openness In those instances openness in education related to open education initiatives requires an engagement in research about the ways in which policy cultural digital and educational environments facilitate a political commitment to open systems of knowledge production and distribution One thing is sure as the essays in this book demonstrated so clearly these developments promise an implicit paradigm of openness and democratic collaboration in education that remains to be realized

Evaluation of Ocean-Energy Conversion Based on Linear Generator Concepts Michael A. Stelzer, 2012-07-03

EVALUATION OF OCEAN ENERGY CONVERSION BASED ON LINEAR GENERATOR CONCEPTS As the world continues to demand greater productivity and lifestyle enrichment through technological advancements the demand for electrical power is predicted to escalate dramatically Thus far this increased demand has been primarily supplied from fossil fueled plants Unfortunately the burning of fossil fuels produce harmful carbon dioxide pollution as a by product It has been hypothesized that unless a clean renewable and efficient alternate source of energy is found soon the world may either exhaust its supplies of energy producing materials or drastically degrade its environment However motions that occur naturally such as ocean waves can play a significant role in generating environmentally safe and economically viable energy for human utilization The focus of this work predicts the electrical power generation capabilities from a seabed mounted linear generator tethered to a floating buoy heaving under the influence of passing ocean surface waves Mathematical models are introduced which simulate the oceans surface conditions under both the regular basic and irregular natural wave regimes the heave vertical displacement response for a floating buoy and the resulting electrical output parameters of the linear generator Within these models various physical and electrical parameters are altered in an attempt to generate a greater output power for a given sea state condition making the Wave Energy Converter WEC more efficient It is shown theoretically that the buoy can be designed to have a greater heave response than that of the height of a passing wave resulting in an increase in generated power from the linear generator Author Information Dr Michael A Stelzer is a Certified Project Manager and Senior Electronic Technician with a Ph D in Electrical and Computer Engineering During his career to date Mr Stelzer has published four additional educational titles and has been admitted into Cambridge Who s Who top 101 industry experts Higher Education in the United States James J.
