Zee, 2020-10-27 The essential primer for physics students who want to build their physical intuition Presented in A Zee's incomparably engaging style this book introduces physics students to the practice of using physical reasoning and judicious guesses to get at the crux of a problem An essential primer for advanced undergraduates and beyond Fly by Night Physics reveals the simple and effective techniques that researchers use to think through a problem to its solution or failing that to smartly guess the answer before starting any calculations In typical physics classrooms students seek to master an enormous toolbox of mathematical methods which are necessary to do the precise calculations used in physics Consequently students often develop the unfortunate impression that physics consists of well defined problems that can be solved with tightly reasoned and logical steps Idealized textbook exercises and homework problems reinforce this erroneous impression As a result even the best students can find themselves completely unprepared for the challenges of doing actual research In reality physics is replete with back of the envelope estimates order of magnitude guesses and fly by night leaps of logic Including exciting problems related to cutting edge topics in physics from Hawking radiation to gravity waves this indispensable book will help students more deeply understand the equations they have learned and develop the confidence to start flying by night to arrive at the answers they seek For instructors a solutions manual is available upon request **Nature** Sir Norman Lockyer, 2007 **Energy Research Abstracts**, 1989 *How Did the First Stars and Galaxies Form?* Abraham Loeb, 2010 Covers all the basic concepts in cosmology drawing on insights from an astronomer who has pioneered much of this research over the past two decades Abraham Loeb starts from first principles tracing the theoretical foundations of cosmology and carefully explaining the physics behind them Choice, 2008 **The British National Bibliography** Arthur James Wells, 2007 **Government Reports Annual Index**, 1989 *Astrophysics* Sten F. Odenwald, 2019 Looks at astrophysics including such subjects as the theory of relativity space weather systems and the evolution of stars **Government Reports Announcements & Index**, 1989 **The Writers Directory**, 2013

The Problem of Coronal Heating Philip Judge, James A. Ionson, 2024-03-19 This book reflects on 8 decades of research on one of the longest standing unsolved problems in modern astrophysics why does the Sun form a hot corona The authors give a critical overview of the field and offer suggestions on how to bridge the chasm between what we can measure and what we can calculate They go back to basics to explain why the problem is difficult where we have made progress and where we have not to help the next generation of scientists devise novel techniques to crack such a long lasting problem A way forward is formulated centered around refutation using Bayesian methods to propose and to try to reject hypotheses and models and avoiding seduction by confirmation bias This book is aimed at physicists students and researchers interested in understanding learning from and solving the coronal heating problem in an era of new dedicated facilities such as the Parker Solar Probe and the Daniel K Inouye Solar Telescope The book will appeal to those interested in understanding research methods and how they are changing in the modern academic environment particular in astrophysics and Earth sciences where remote sensing is essential **General physics, relativity, astronomy and mathematical physics and methods**, 2008 Rivista internazionale di fisica
