

Chapter 4 Atomic Structure

Section 4.2 The Structure of an Atom**(pages 108–112)**

This section compares the properties of three subatomic particles. It also discusses atomic numbers, mass numbers, and isotopes.

Reading Strategy (page 108)

Monitoring Your Understanding Before you read, list in the table shown what you know about atoms and what you would like to learn. After you read, list what you have learned. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

What I Know About Atoms	What I Would Like to Learn	What I Have Learned
Most students will know that atoms are the “building blocks” of matter, and some may know that atoms contain subatomic particles.	Based on the title of the section, students may say that they want to learn more about the structure of atoms.	

Properties of Subatomic Particles (pages 108–109)

- What are three subatomic particles?
a. Protons b. Electrons c. Neutrons
- Circle the letter that identifies a subatomic particle with a positive charge.
a. nucleus **(b)** proton
c. neutron d. electron
- Why did Chadwick conclude that the particles produced by his experiment were neutral in charge? A charged object did not deflect the paths of the particles.

Comparing Subatomic Particles (pages 109–110)

- Circle the letters of properties that vary among subatomic particles.
a. color **(b)** mass
(c) charge **(d)** location in the atom
- Circle the letter of the expression that accurately compares the masses of neutrons and protons.
(a) mass of 1 neutron = mass of 1 proton
b. mass of 2000 neutrons = mass of 1 proton
c. mass of 1 electron = mass of 1 proton
d. mass of 1 neutron = mass of 1 electron

Double-Differential Charged-Current Quasi-Elastic Scattering Cross Section at MINERvA Cheryl E.

Patrick,2017-11-15 This thesis represents the first double differential measurement of quasi elastic anti neutrino scattering in the few GeV range a region of substantial theoretical and experimental interest as it is the kinematic region where studies of charge parity CP violation in the neutrino sector most require precise understanding of the differences between anti neutrino and neutrino scatter This dissertation also presents total antineutrino scintillator quasi elastic cross sections as a function of energy which is then compared to measurements from previous experiments Next generation neutrino oscillation experiments such as DUNE and Hyper Kamiokande hope to measure CP violation in the lepton sector In order to do this they must dramatically reduce their current levels of uncertainty particularly those due to neutrino nucleus interaction models As CP violation is a measure of the difference between the oscillation properties of neutrinos and antineutrinos data about how the less studied antineutrinos interact is especially valuable The measurement described herewith determines the nuclear and instrumental effects that must be understood to undertake precision neutrino physics As well as being useful to help reduce oscillation experiments uncertainty this data can also be used to study the prevalence of various correlation and final state interaction effects within the nucleus In addition to being a substantial scientific advance this thesis also serves as an outstanding introduction to the field of experimental neutrino physics for future students The Science of Construction
