Digital Forensic Science Vassil Roussev, 2016-12-28 Digital forensic science or digital forensics is the application of scientific tools and methods to identify collect and analyze digital data artifacts in support of legal proceedings From a more technical perspective it is the process of reconstructing the relevant sequence of events that have led to the currently observable state of a target IT system or digital artifacts Over the last three decades the importance of digital evidence has grown in lockstep with the fast societal adoption of information technology which has resulted in the continuous accumulation of data at an exponential rate Simultaneously there has been a rapid growth in network connectivity and the complexity of IT systems leading to more complex behavior that needs to be investigated The goal of this book is to provide a systematic technical overview of digital forensic techniques primarily from the point of view of computer science This allows us to put the field in the broader perspective of a host of related areas and gain better insight into the computational challenges facing forensics as well as draw inspiration for addressing them This is needed as some of the challenges faced by digital forensics such as cloud computing require qualitatively different approaches the sheer volume of data to be examined also requires new means of processing it

Public expenditure Great Britain: Parliament: House of Commons: Health Committee, 2012-01-24 The fact that there is another bill going through Parliament changing the management structure of the NHS means that there is a tendency for every comment about the NHS to be framed by the debate about the bill But the NHS is well used to management change In reality the key pressures which are building in the system arise from the fact that demand is continuing to grow at a time when health and social care budgets have stopped growing This development has been well signposted The implications were first highlighted by Sir David Nicholson in May 2009 and endorsed by both the previous government and the Coalition This report is a review of progress within the health and care system towards meeting the Nicholson challenge The NHS funding challenge can only be met by rethinking and redesigning the way health services are delivered now in order to deliver lasting long term benefits The Committee's December 2010 report HC 512 session 2010 11 ISBN 9780215555601 on health expenditure already expressed concerns then about the ability of the health service and local authorities to make the demanding efficiency gains required of them by the 2010 Spending Review while maintaining quality of care Both the NHS and local authorities are struggling to meet current targets in a sustainable long term manner that will maintain high quality efficient care in the future The need to provide high quality and efficient services that meet local needs within the funding available must be addressed as a matter of urgency
