Thinking with Maps Bertram C. Bruce, 2021-05-15 A 2022 Choice Reviews Outstanding Academic Title Spatial reasoning which promises connection across wide areas is itself ironically often not connected to other areas of knowledge Thinking with Maps Understanding the World through Spatialization addresses this problem developing its argument through historical analysis and cross disciplinary examples involving maps The idea of maps here includes traditional cartographic representations of physical environments but more broadly encompasses the wide variety of ways that visualizations are used across all disciplines to enable understanding to generate new knowledge and to effect change The idea of thinking with maps is also used broadly Maps become not simply one among many items to learn about but indispensable tools for thinking across every field of inquiry in a way similar to that of textual and mathematical language Effective use of maps becomes a way to make knowledge much as writing or mathematical exploration not only displays ideas but also creates them The book shows that maps for thinking are not just a means to improve geographic knowledge as valuable as that may be Instead they provide mechanisms for rejuvenating our engagement with the world helping us to become more capable of facing our global challenges This book has a broader aim It is fundamentally about general principles of how we learn and know It calls for a renewed focus on democratic education in which both the means and ends are democratic Education just as the political realm should follow Dewey's dictum that democratic ends need democratic methods for their realization Maps and mapping are invaluable in that endeavor
