Automotive Software Engineering Thomas Zurawka, Joerg Schaeuffele, Roger Carey, 2016-09-18 Since the early seventies the development of the automobile has been characterized by a steady increase in the deployment of onboard electronics systems and software This trend continues unabated and is driven by rising end user demands and increasingly stringent environmental requirements Today almost every function onboard the modern vehicle is electronically controlled or monitored The software based implementation of vehicle functions provides for unparalleled freedoms of concept and design However automobile development calls for the accommodation of contrasting prerequisites such as higher demands on safety and reliability vs lower cost ceilings longer product life cycles vs shorter development times along with growing proliferation of model variants Automotive Software Engineering has established its position at the center of these seemingly conflicting opposites This book provides background basics as well as numerous suggestions rare insights and cases in point concerning those processes methods and tools that contribute to the surefooted mastery of the use of electronic systems and software in the contemporary automobile

Automotive Software Architectures Mirosław Staron, 2017-06-26 This book introduces the concept of software architecture as one of the cornerstones of software in modern cars Following a historical overview of the evolution of software in modern cars and a discussion of the main challenges driving that evolution Chapter 2 describes the main architectural styles of automotive software and their use in cars software In Chapter 3 readers will find a description of the software development processes used to develop software on the car manufacturers side Chapter 4 then introduces AUTOSAR an important standard in automotive software Chapter 5 goes beyond simple architecture and describes the detailed design process for automotive software using Simulink helping readers to understand how detailed design links to high level design Next Chapter 6 presents a method for assessing the quality of the architecture ATAM Architecture Trade off Analysis Method and provides a sample assessment while Chapter 7 presents an alternative way of assessing the architecture namely by using quantitative measures and indicators Subsequently Chapter 8 dives deeper into one of the specific properties discussed in Chapter 6 safety and details an important standard in that area the ISO IEC 26262 norm Lastly Chapter 9 presents a set of future trends that are currently emerging and have the potential to shape automotive software engineering in the coming years This book explores the concept of software

architecture for modern cars and is intended for both beginning and advanced software designers. It mainly aims at two different groups of audience professionals working with automotive software who need to understand concepts related to automotive architectures and students of software engineering or related fields who need to understand the specifics of automotive software to be able to construct cars or their components. Accordingly, the book also contains a wealth of real world examples illustrating the concepts discussed and requires no prior background in the automotive domain.

Automotive Model Predictive Control Luigi Del Re, Frank Allgöwer, Luigi Glielmo, Carlos Guardiola, Ilya Kolmanovsky, 2010-03-11 Automotive control has developed over the decades from an auxiliary technology to a key element without which the actual performances emission safety and consumption targets could not be met Accordingly automotive control has been increasing its authority and responsibility at the price of complexity and difficult tuning The progressive evolution has been mainly led by specific applications and short term targets with the consequence that automotive control is to a very large extent more heuristic than systematic Product requirements are still increasing and new challenges are coming from potentially huge markets like India and China and against this background there is wide consensus both in the industry and academia that the current state is not satisfactory Model based control could be an approach to improve performance while reducing development and tuning times and possibly costs Model predictive control is a kind of model based control design approach which has experienced a growing success since the middle of the 1980s for slow complex plants in particular of the chemical and process industry In the last decades several developments have allowed using these methods also for fast systems and this has supported a growing interest in its use also for automotive applications with several promising results reported Still there is no consensus on whether model predictive control with its high requirements on model quality and on computational power is a sensible choice for automotive control

Nonlinear Estimation and Control of Automotive Drivetrains Hong Chen, Bingzhao Gao, 2013-12-30 Nonlinear Estimation and Control of Automotive Drivetrains discusses the control problems involved in automotive drivetrains particularly in hydraulic Automatic Transmission AT Dual Clutch Transmission DCT and Automated Manual Transmission AMT Challenging estimation and control problems such as driveline torque estimation and gear shift control are addressed by applying the latest nonlinear control theories including constructive nonlinear control Backstepping Input to State Stable and Model Predictive Control MPC The estimation and control performance is improved while the calibration effort is reduced significantly The book presents many detailed examples of design processes and thus enables the readers to understand how to successfully combine purely theoretical methodologies with actual applications in vehicles The book is intended for researchers PhD students control engineers and automotive engineers Hong Chen is a professor at the State Key Laboratory of Automotive Simulation and Control and the Department of Control Science and Engineering at Jilin University Bingzhao Gao is an associate professor at the State Key Laboratory of Automotive Simulation and Control at Jilin University
