Buxton,Stanley M. Roberts,1996 Takes the reader step by step from the structures of

simple molecules such as methane to the basic shapes of biologically important macromolecules such as proteins and nucleic acids Deals with the concept of chirality which is often overlooked by many texts Chirality is approached by firstly explaining the stereochemistry of compounds with one stereogenic centre then dealing with compounds having two or more stereogenic centres before focusing on compounds possessing axes of chirality The importance of stereochemistry in a wide variety of transformations for example addition reactions eliminations and cycloadditions is discussed The final chapters describe the application of stereocontrol in asymmetric synthesis indicating the use of chiral auxiliaries and chiral catalysts in modern chemistry

Gill,2012-12-06 1 1 orbital theory has had some notable successes in the analysis of individual organic reactions and in correlations between reaction series Gen II the theory has invoked to explain known chemical phenomena and rather infrequently broadly based predictions In 1965 Woodward and published series of papers the 1 1 orbital interpretation of various types of concerted cyclo addition reactions which hitherto had rather been understood Because these processes now known as pericyclic reactions had great synthetic importance and because the Woodward Hoffmann theory was stated so explicitly as to allow useful and far reaching predictions to made the general acceptance of the so called Woodward Hoffmann Rules was very rapid Judging from the vast number of publications that have appeared great deal of experimental effort has channelled into this general area since that time the results of which provide vindication of the rules The theoretical basis of Woodward and Hoffmann's method has however the subject of criticism and controversy and of alternative theoretical methods have also appeared university departments including our own have for some time covered pericyclic reactions in their undergraduate and graduate courses Because aims teaching methods and personal preferences differ widely each of the various theoretical methods have achieved some currency We have sought to put these methods in some sort of perspective The book is intended to be introductory being aimed primarily at final year undergraduates and first year postgraduates **Science Reporter** ,1986
