

A dramatic black and white photograph of a space shuttle launching. The shuttle is on the left, angled upwards, with a massive, bright white plume of fire and smoke trailing behind it. The background is a dark, cloudy sky, with the clouds illuminated from below, creating a high-contrast, atmospheric effect. The overall tone is serious and scientific.

Announcer American Association of Physics Teachers, 2001 *Physics* Eugene Hecht, 1996 While the text covers the standard range of material from kinematics to quantum physics Hecht has carefully limited the math required to basic calculus and very basic vector analysis He omits obscure high level topics while focusing on helping students understand the fundamental concepts of modern day physics Calculus and vector analysis are both painstakingly developed as tools and then used only insofar as they illuminate the physics Hecht deliberately goes slowly justifies where each topic is going stops to take stock of where the students have been and points out the marvelous unity of the discourse Informed by a 20th century perspective and a commitment to providing a conceptual overview of the discipline this book is a return to basics *Energy in Orthodox Theology and Physics* Stoyan Tanev, 2017-08-29 It is well known that energy is a fundamental concept in physics Much less well known is that it is also a key concept in Eastern Christian or Orthodox theology This book from Dr Stoyan Tanev a physicist innovation management scholar and theologian provides a comparative analysis of the conceptualizations of energy in Orthodox theology and in physics and demonstrates the potential of such comparison for a better understanding of these two quite different domains of human enquiry The book explores the rediscovery of the Byzantine Church's teaching

on the Divine energies in twentieth century Orthodox theology and offers new insights about the key contributions of key theologians such as Sergius Bulgakov George Florovsky John Meyendorff Christos Yannaras and Thomas Torrance Where do the understandings of energy in theology and physics meet The author argues that the encounter between theology and physics happens at the level of quantum physics where the subtle use of words and language acquires a distinctive apophatic dimension His comparative approach focuses on the epistemological struggles of theologians and physicists According to Tanev this focus on the struggles of knowing offers a new way to look at the dialogue between science and theology
