Planthoppers R. F. Denno, John R. Perfect, 2012-12-06 Planthoppers include some of the most devastating pests of major agricultural crops throughout the world One species the rice brown planthopper is among the most economically important pests in Asia In past decades government policies encouraged the control of rice planthoppers with synthetic pesticides a tactic which promoted insecticide resistance and often led to the pesticide induced resurgence of pest populations To deter planthopper outbreaks a more ecologically sound management strategy is being implemented one based on a thorough investigation of population dynamics natural enemies and the genetics of host plant and insecticide adaptation In the natural habitats of North America and Europe scientists have also used planthoppers as model organisms to test ecological and evolutionary theory The consequence of these diverse studies is an extremely scattered literature on planthoppers that has never been synthesized from an ecological perspective This volume summarizes what is known about planthopper ecology and biological control It takes a theoretical approach yet is deeply concerned with the application of theory to the practical problems of pest management
