work of the BI system many Power BI users skip the learning of it and become aware of it somewhere along their BI project. Once they get familiar with it they realize there are tons of things they could have implemented easier, faster and in a much more maintainable way using Power Query. In other words they learn mastering Power Query is the key skill toward mastering Power BI. We have been working with Power Query since the very early release of that in 2013 named Data Explorer and wrote blog articles and published videos about it. The number of articles we published under this subject easily exceeds hundreds. Through those articles some of the fundamentals and key learnings of Power Query are explained. We thought it is good to compile some of them in a book. A good analytics solution combines a good data model, good data preparation and good analytics and calculations. Reza has written another book about the Basics of modeling in Power BI and a book on Power BI DAX Simplified. This book is covering the data preparation and transformations aspects of it. This book is for you if you are building a Power BI solution. Even if you are just visualizing the data preparation and transformations are an essential part of analytics. You do need to have the cleaned and prepared data ready before visualizing it. This book is compiled into a series of two books which will be followed by a third book later. Getting started with Power Query in Power BI and Excel, this book Mastering Power Query in Power BI and Excel already available to be purchased separately. Power Query dataflows will be published later. Although this book is written for Power BI and all the examples are presented using the Power BI. However the examples can be easily applied to Excel Dataflows and other tools and services using Power Query.
