

INTRODUCTION

Semiconductors :-

Most of the solids can be placed in one of the two classes: Metals and insulators. Metals are those through which electric charge can easily flow, while insulators are those through which electric charge is difficult to flow. This distinction between the metals and the insulators can be explained on the basis of the number of free electrons in them. Metals have a large number of free electrons which act as charge carriers, while insulators have practically no free electrons.

There are however, certain solids whose electrical conductivity is intermediate between metals and insulators. They are called 'Semiconductors'. Carbon, silicon and germanium are examples of semiconductors. In semiconductors the outer most electrons are neither so rigidly bound with the atom as in an insulator, nor so loosely bound as in metal. At absolute zero a semiconductor becomes an ideal insulator.

Fumi,1976 From Imitation to Innovation Kiyonori Sakakibara,2015-08-05 Excerpt from From Imitation to Innovation The Very Large Scale Integrated Vlsi Semiconductor Project in Japan Interest in Japanese management style has been mounting rapidly partially as a result of the great competitive strength of Japanese firms especially those in steel automobile and electronics industries An increasing number of observers in the United States and European countries are now lauding Japanese management Many U S universities have developed or are planning various programs about Japanese management Two recent books on Japanese management Ouchi s Theory Z and Pascale and Athos s The Art of Japanese Management were on the bestseller list in the U S In spite of this strong interest many discussions are still confined to such topics as workers loyalty lifetime employment

system and consensus oriented decision making Discussions on the characteristics of the technological innovation processes in Japanese firms are comparatively rare We know very little about technological innovation processes in Japanese organizations and managerial behavior involved and even less about the strengths and weaknesses of Japanese technology management compared to that in the U S and European firms This is not altogether without reason The technological accomplishments of Japanese industry have been largely based on mass produced and standardized items process engineering and quality control Japan has not contributed much to developing new concepts and systems or making technological breakthroughs But many observers believe Japan should change its policies for science and technology from emphasizing imitation to promoting invention Recent national projects for research and development in Japan have in fact moved from catching up with foreign technology to developing originality About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *New Developments in Semiconductor Physics* F.
