

1. In Model 1, what does a dot represent?
2. Name two materials that the containers in Model 1 could be made from that would ensure that they were "nonflexible?"
3. In Model 1, the length of the arrows represents the average kinetic energy of the molecules in that sample. Which gas variable (P_{internal} , V, T or n) is most closely related to the length of the arrows in Model 1?
4. Complete the following table for the two experiments in Model 1.

	Experiment A	Experiment B
Independent Variable		
Dependent Variable		
Controlled Variable(s)		

5. Of the variables that were controlled in both Experiment A and Experiment B in Model 1, one requires a nonflexible container. Name this variable, and explain why a nonflexible container is necessary. In your answer, consider the external and internal pressure data given in Model 1.

Read This!

Pressure is caused by molecules hitting the sides of a container or other objects. The pressure changes when the molecules change *how often* or *how hard* they hit. A nonflexible container is needed if the gas sample is going to have an internal pressure that is different from the external pressure. If a flexible container is used, the internal pressure and external pressure will always be the same because they are both pushing on the sides of the container equally. If either the internal or external pressure changes, the flexible container walls will adjust in size until the pressures are equal again.
