

appears to be chosen for IH as it uses for High frequency application [6]. Nonetheless, MOSFET devices has variation in temperature depends upon on-state resistance that leads the voltage stress across the devices. Proposed series combination of MOSFET devices enables both an on-state losses minimization and decreased switching times while requiring the same chip area [7]-[10]. Furthermore, the temperature variation of the on-state resistance is reduced, enabling greater efficiency even if a greater ambient temperature is reflected (90°C). The motivation for using combination of series-connected MOSFETs switch is to minimize the voltage stress on the MOSFETs. Thus recover the breakdown voltage. Hence the switch heat management and system performance will be enriched. Series resonant converter is used to enhance the soft switching operation by creating ZVS or ZCS [11]-[13]. IH coil inductance series/parallel connected to reduce the switching loss. In proposed circuit, chooses the ZVS as capacitor connected in series with IH coil inductance to create resonant circuit [14]-[15]. Switched capacitor bank added to improve the output power of the implemented inverter as it's done by charging/discharging through the auxiliary switch [6].

2. CIRCUIT DIAGRAM

Figure 1. Proposed Series resonant converter

Figure 1 shows the basic configuration of the proposed high frequency inverter circuit. The inverter circuit mainly comprises of half bridges with upper section and lower section. Upper switches are MH1, MH2, MH3 and lower switches are ML1, ML2, ML3, load (L_0 and R_0). Each MOSFET switch consists of anti parallel diode and capacitor to obtain the ZVS condition and protection of switches. PFC boost converter circuit comprises of inductor (L_p), switch (Q_p), capacitor (C_p) and diode (D_p), resonant capacitors ($Cr1$), and auxiliary switched capacitor network ($Cr2$). $Cr1$ is engaged in series with IH load and creates resonance with load L_0 . Switched capacitor $Cr2$ is connected in parallel with Q_3 and also creates the resonance and zero voltage soft-switching condition of Q_3 . L_0 and R_0 are the inductance and resistance of the IH coil and load, respectively.

The equivalent circuit of modes of operation are described below with considering the inverter section. Figure 2 shows the switching pulses of the different switches.
