Investigation 3 Solving Equations

I can recognize problem situations in which two variables have a linear relationship and solve rate of change problems.

In the last investigation, you examined the patterns in the table and graph for the relationship relating Alana's distance d and money earned A in the walkathon.

What is another way to represent the relationship?

The graph of the relationship is a line that contains infinitely many points. The coordinates of each point can be substituted into the equation to make a true statement. The coordinates of these points are solutions to the equation.

EXAMPLE:

The point $(3, 6.5)$ lies on the line of $A = 5 + 0.5d$. This means that $d = 3$, $A = 6.5$, and $6.5 = 5 + 0.5(3)$ is a true statement. So the coordinate pair $(3, 6.5)$ is a solution to the equation.
