Prenatal Stress and Child Development Ashley Wazana,Eszter Székely,Tim F. Oberlander,2021-04-19 This book examines the complex impact of prenatal stress and the mechanism of its transmission on children s development and well being including prenatal programming epigenetics inflammatory processes and the brain gut microbiome It analyzes current findings on prenatal stressors affecting pregnancy including preconception stress prenatal maternal depression anxiety and pregnancy specific anxieties Chapters explore how prenatal stress affects cognitive affective behavioral and neurobiological development in children while pinpointing core processes of adaptation resilience and interventions that may reduce

negative behaviors and promote optimal outcomes in children. This complex perspective on mechanisms by which early environmental influences interact with prenatal programming of susceptibility aims to inform clinical strategies and future research targeting prenatal stress and its cyclical impact on subsequent generations. Key areas of coverage include: The developmental effects of prenatal maternal stress on children; Epigenetic effects of prenatal stress; Intergenerational transmission of parental early life stress; The microbiome gut brain axis and the effects of prenatal stress on early neurodevelopment; The effect of prenatal stress on parenting; Gestational stress and resilience; Prenatal stress and children's sleeping behavior; Prenatal, perinatal, and population based interventions to prevent psychopathology. *Prenatal Stress and Child Development* is an essential resource for researchers, professors and graduate students as well as clinicians, therapists and related professionals in infancy and early childhood development, maternal and child health, developmental psychology, pediatrics, social work, child and adolescent psychiatry, developmental neuroscience and related behavioral and social sciences and medical disciplines.

Excerpt from the foreword: I would make the plea that in addition to anyone with an interest in child development, this book should be essential reading for researchers pursuing pre-clinical, basic science models of neurodevelopment and brain health. This book provides what in my mind is the most advanced compilation of existing knowledge and state of the art science in the field of prenatal psychiatry, psychology and perhaps in the entire field of prenatal medicine. This volume can brilliantly serve to focus future directions in our understanding of the perinatal determinants of brain health.

Michael J. Meaney, James McGill Professor of Medicine, Translational Neuroscience Programme, Adjunct Professor of Paediatrics. *Creating Theoretical Research Frameworks using Multiple Methods* Sergey V. Samoilenko, Kweku-Muata Osei-Bryson, 2017-10-30.

By now it is commonly accepted that investments in information and communication technologies (ICTs) can facilitate macroeconomic growth in developed countries. Research standards in ICT for development (ICT4D) are high and it is a basic expectation that a theoretically sound conceptual investigation should yield actionable results. An additional expectation is that an on-the-ground study conducted in each setting should add to the common body of knowledge based on theory. In other words, one is expected to make a connection between the world of concepts and the world of reality. Middle range theories and frameworks could help connect the case studies with grand theories by helping to create a theoretically sound and practically applicable research architecture of ICT4D. This book demonstrates how creative use of various data analysis methods, e.g. data mining, DM, data envelopment analysis (DEA) and structural equation modeling (SEM) and conceptual frameworks, e.g. neoclassical growth accounting, chaos and complexity theories, may be utilized for inductive and deductive purposes to develop and to test in step-by-step fashion theoretically sound frameworks for a large subset of ICT4D research questions. Specifically, this book showcases the utilization of DM, DEA and SEM for the following purposes:

- Identification of the relevant context-specific constructs; inductive application
- Identification of the relationships between the constructs; inductive application
- Development of a framework incorporating

the constructs and relationships discovered inductive application Testing of the constructed framework deductive application The book takes a multi theoretical perspective to economic development research It starts with an overview of ICT4D Next it covers such frameworks and theories as neoclassical growth accounting and the theory of complementarity complex systems and chaos theories and the product life cycle PLC theory There are also nontechnical overviews of the DM and data analytic methods that can be used in this research Also presented is evidence that human capital and investment capital are complementary and are reliable sources of economic growth The book concludes with methodological frameworks to guide investment decisions and the formulation of strategic policy **Yale Law Journal: Volume 125, Number 5 - March 2016**

Eva Jonas,Christina Mühlberger,2018-01-12 If we want to understand people s responses to threats in social interactions we can distinguish between three levels of analysis On a social level of analysis we can describe people s interpersonal behavior on a cognitive level we can identify corresponding information processing mechanisms and on a neural level we can specify neural systems which underlie these processes In this Research Topic we want to present research connecting these three levels of analysis and propose their functional interconnection in social interaction We propose that threats in social interactions activate basic motivational processes which manifest in neural processes related to behavioral inhibition vs activation in a social situation This shapes our attention to new information and affects our cognitions about social identities belief systems and worldviews These changes in social cognition in turn affect people s behavior in social interactions and lead to corresponding reactions on behalf of the interaction partner Thus we assume that people s reactions to threat in interactions can be described as sequences of broader attentional processes resulting from basic motivational tendencies leading to specific social cognitions and subsequent behavior within social interactions We can analyze this sequence in order to contribute to a better understanding of social interactions The three levels of analyses social cognitive neural shed light on social interactions from different angles On the social level we can analyze how the

behaviors of the interaction partners mutually affect each other and how this is accompanied by specific cognitive emotional and motivational processes On the cognitive level we can analyze people's perception of a social situation leading to attentional and reasoning processes with regard to their interaction partners which may be accompanied by certain emotional and motivational processes and determines the behavior towards the partners Finally we can focus on the neural mechanisms underlying cognitive emotional and motivational processes in social interactions
