Alternative Energy Systems and Applications B. K. Hodge, 2017-03-02 The comprehensive guide to engineering alternative and renewable energy systems and applications updated for the latest trends and technologies This book was designed to help engineers develop new solutions for the current energy economy To that end it provides technical discussions along with numerous real world examples of virtually all existing alternative energy sources applications systems and system components All chapters focus on first order engineering calculations and consider

alternative uses of existing and renewable energy resources Just as important the author describes how to apply these concepts to the development of new energy solutions Since the publication of the critically acclaimed first edition of this book the alternative renewable and sustainable energy industries have witnessed significant evolution and growth Hydraulic fracturing fossil fuel reserve increases the increasing popularity of hybrid and all electric vehicles and the decreasing cost of solar power already have had a significant impact on energy usage patterns worldwide Updated and revised to reflect those and other key developments this new edition features expanded coverage of topics covered in the first edition as well as entirely new chapters on hydraulic fracturing and fossil fuels hybrid and all electric vehicles and more Begins with a fascinating look at the changing face of global energy economy Features chapters devoted to virtually all sources of alternative energy and energy systems Offers technical discussions of hydropower wind passive solar and solar thermal photovoltaics fuel cells CHP systems geothermal ocean energy biomass and nuclear Contains updated chapter review questions homework problems and a thoroughly revised solutions manual available on the companion website While *Alternative Energy Systems and Applications Second Edition* is an ideal textbook reference for advanced undergraduate and graduate level engineering courses in energy related subjects it is also an indispensable professional resource for engineers and technicians working in areas related to the development of alternative renewable energy systems

Environmental Management in India: Waste to Wealth Shalini Yadav, Abdelazim M. Negm, Ram Narayan Yadava, 2022-04-01 This book presents unique connectivity between waste management within the agenda 2030 of India This book is the first publication presenting up to date work and knowledge about waste management and waste technologies to transfer waste to wealth in India Besides this book also presents the role of waste management and its contribution to achieving a sustainable development program in India with vast implication worldwide The main focuses of the book include waste and wealth and the associated technologies recycling of solid waste utilization of hazardous waste use of nanoparticle in waste management urban solid waste generation of energy from organic waste clean technologies and use of waste in agriculture The book is a unique source of information on the transformation of waste to wealth in India This book is of interest to research communities in the field of waste management in India and in similar socioeconomic countries but also due to the planetary implications has global interest

Environmental Health in the 21st Century Richard V. Crume, 2018-02-08 This concisely written and easy to read resource provides information on emerging issues and valuable historical context that enables students to better understand a broad range of environmental health topics from pollution to infectious diseases natural disasters and waste management As technology enables better insight into the world we live in we are increasingly aware of environmental health concerns and risks from contaminated air and water to infectious diseases and light and noise pollution Because the quality of our lives depends on the quality of our environment everyone should be informed about issues in environmental health *Environmental Health in the 21st Century From Air Pollution to Zoonotic Diseases* presents hundreds

A Decision Support Model for Waste to Energy Conversion ,2019 The effective management of municipal solid waste MSW is of interest in provision of energy secondary raw materials for sustainable development and reduction of the environmental burden The need for effective management of MSW in an environmentally friendly technologically viable economically feasible and socially acceptable way is a common challenge facing developing countries Environmental externalities bring about a steep rise in the cost of waste minimization and process improvement with negative impact on the limited financial resources of government agencies Cities and local governments should consider the full waste hierarchy towards an enabling action for reduction reusing and recycling in planning of MSW management prior to energy recovery In actualizing the effective waste management and resource recovery from waste technology appropriation the conversion technology depends on the state and composition of the waste The aim of this research is to develop an appropriate waste management decision support system that is beneficial to both the government and the environment In addressing the above mentioned challenges a qualitative approach was adopted which includes getting waste management data from government reports books and articles to determine sustainable indicators such as Environmental Socio cultural Technical and Economic indicators The Analytical Hierarchy Process AHP tool addressed the capital cost in the comparison of the waste to energy WtE approval process technologies Based on the approximation method for normalization comparison matrix the results revealed that Environment was more important with a priority vector score of 0.4537 towards the goal followed by Sociocultural at 0.2495 Economical at 0.2168 and Technical at 0.0800 in relation to the costing and maturity of the technology in South Africa Projected Costs of Generating Electricity Organisation for Economic Co-operation and Development,2005 The joint IEA NEA study provides generation cost estimates for over a hundred power plants that use a

variety of fuels and technologies These include coal fired gas fired nuclear hydro solar and wind plants Cost estimates are also given for combined heat and power plants that use coal gas and combustible renewables Data and information for this study were provided by experts from 19 OECD member countries and 3 non member countries The power plants examined in the study use technologies available today The study shows that the competitiveness of alternative generation sources and technologies ultimately depends on many parameters there is no clear cut winner Major issues related to generation costs addressed in the report include descriptions of state of the art generation technologies the methodologies for incorporating risk in cost assessments the impact of carbon emission trading and how to integrate wind power into the electricity grid
