Forensic Medicine of the Lower Extremity Jeremy Rich, Dorothy E. Dean, Robert H. Powers, 2007-10-28 Publius Syrus stated back in 42 B C You cannot put the same shoe on every foot Maxim 596 Though written long before the advent of forensic science Syrus maxim summarizes the theme of Forensic Medicine of the Lower Extremity Human Identification and Trauma Analysis of the Thigh Leg and Foot Put simply the lower extremity is a tremendously variable anatomic region This variation is beneficial to forensic experts Differences in the leg and foot can be used to establish individual identity Analysis of damage to the lower limb can be used to reconstruct antemortem perimortem and postmortem trauma As a forensic anthropologist I analyze cases involving decomposed burned m mified mutilated and skeletal remains Many of the corpses I examine are incomplete Occasionally I receive nothing but the legs and feet a lower torso dragged from a river a foot recovered in a city park dismembered drug dealers in plastic bags victims of bombings and airline disasters and the dead commingled in common graves Though the leg and foot contain much that is useful in forensic analysis before this publication investigators faced a twofold problem Little research that focused on the lower extremity was available in the literature and the existing research was published in diverse sources making its location and synthesis a daunting task

Cellular Organelles and the Extracellular Matrix Edward Bittar, 1996-01-04 This volume is in two parts The first contains the remaining chapters on cellular organelles and several chapters relating to organelle disorders An account of mitochondriopathy is given in the chapter on the mitochondrion rather than in a separate one The subject matter of this part of the volume shows quite clearly that the interdisciplinary approach to the study of organelles has shed considerable light on the nature of the mechanisms underlying the etiology and pathobiology of many of these disorders As an example mutations in the genes encoding integral membrane proteins are found to lead to disturbances in peroxisome assembly It is also interesting and significant that mistargeting of protein is now thought to be another cause It will be revealing to see whether mistargeting is the result of mutations in the genes encoding chaperones The second part of the volume is concerned with the extracellular matrix It sets out to show that a vast body of new knowledge of the extracellular matrix is available to us Take for example the integrin family of cell adhesion receptors It turns out that integrins play a key role not only in adhesion

but also in coupling signals to the nucleus via the cytoskeleton As for fibronectins they seem to link the matrix with the cytoskeleton by interacting with integrins Collagen molecules are dealt with in the last two chapters The boundaries of collagen in disease are defined by drawing a clear line of demarcation between systemic connective tissue disorders e g scleroderma better known as autoimmune diseases and the heritable and the heritable diseases such as osteogenesis imperfect and the Marfan syndrome This classification takes into account a second group of acquired disorders of collagen forming tissues in which regional fibrosis is the hallmark Liver cirrhosis and pulmonary fibrosis are prime examples The decision to place Volumes 2 and 3 before those dealing with cell chemistry was not easily made It was based on the view that most students will have had an undergraduate course in biochemistry of cell biology or both courses and that they could go to Volumes 4 7 in which the subject of cell chemistry is covered and then return to Volumes 2 and 3

Introduction to Nanoscience Gabor L. Hornyak, Joydeep Dutta, H.F. Tibbals, Anil Rao, 2008-05-15 Tomorrow s nanoscientist will have a truly interdisciplinary and nano centric education rather than for example a degree in chemistry with a specialization in nanoscience For this to happen the field needs a truly focused and dedicated textbook This full color masterwork is such a textbook It introduces the nanoscale along with the societal impacts of nanoscience then presents an overview of characterization and fabrication methods The authors systematically discuss the chemistry physics and biology aspects of nanoscience providing a complete picture of the challenges opportunities and inspirations posed by each facet before giving a brief glimpse at nanoscience in action nanotechnology

Integrated Molecular and Cellular Biophysics Valerica Raicu, Aurel Popescu, 2008-06-17 Biophysics represents perhaps one of the best examples of interdisciplinary research areas where concepts and methods from disciplines such as physics biology b chemistry colloid chemistry and physiology are integrated It is by no means a new eld of study and has actually been around initially as quantitative physiology and partly as colloid science for over a hundred years For a long time biophysics has been taught and practiced as a research discipline mostly in medical schools and life sciences departments and excellent biophysics textbooks have been published that are targeted at a biologically literate audience With a few exceptions it is only relatively recently that biophysics has started to be recognized as a physical science and integrated into physics departments curr ula sometimes under the new name of biological physics In this period of cryst lization and possible rede nition of biophysics there still exists some uncertainty as to what biophysics might actually represent A particular tendency among phy cists is to associate biophysics research with the development of powerful new te niques that should eventually be used not by physicists to study physical processes in living matter but by biologists in their biological investigations There is value in that judgment and excellent books have been published that introduce the int ested reader to the use of physical principles for the development of new methods of investigation in life sciences

Subject Headings National Library of Medicine (U.S.),2001 **Introduction to Nanoscience and Nanotechnology**

Gabor L. Hornyak,H.F. Tibbals,Joydeep Dutta,John J. Moore,2008-12-22 The maturation of nanotechnology has revealed it to be a unique and distinct discipline rather than a specialization within a larger field Its textbook cannot afford to be a chemistry physics or engineering text focused on nano It must be an integrated multidisciplinary and specifically nano textbook The archetype of the modern nano textbook *Physiology of Domestic Animals* Oystein V. Sjaastad,Olav Sand,Knut Hove,2010 This textbook is primarily targeted towards students of veterinary animal and agricultural sciences but it is also well suited for university courses in general and mammalian physiology The textbook emphasizes functional aspects of physiology The book contains color illustrations short clarifying statements placed in the margin questions and clinical examples
