Development of an Inhalable Nanoemulsion System for the Delivery of Hydrophobic Pharmaceuticals and Restoration of NK Cell Function in Cancer Therapy Sookyung Hwang, 2025 Nanoemulsions are colloidal dispersions of two immiscible liquid phases stabilized by surfactants with droplet sizes typically between 20 and 200 nm. Their small droplet size yields a high surface area improving drug solubility, bioavailability and kinetic stability. Nanoemulsions that are produced by high energy top down methods such as homogenization and sonication allow precise control over droplet size resulting in enhanced physical stability and tunable rheological properties. The use of Generally Recognized As Safe GRAS excipients further ensures biocompatibility and low toxicity making nanoemulsions a versatile platform for drug delivery across pharmaceutical, cosmetic and nutraceutical industries. In this thesis an oil in water nanoemulsion was formulated to aid direct drug delivery of small molecule to pulmonary region to improve treatment efficacy in respiratory diseases such as non small cell lung cancer with enhanced safety and efficiency. Medium chain triglyceride MCT was adopted as the oil core and DSG PEG2000 as the surfactant achieving stable droplet size of *An Introduction to Food Grade Nanoemulsions* Nandita Dasgupta, Shivendu Ranjan, 2018-01-03 This book provides authentic and comprehensive information on the concepts, methods, functional details and applications of nano emulsions.
