Which of the following are terms for an area of an enterprise network, separated by firewalls, which contains servers that must be accessible both from the Internet and from the internal network? (Choose all that apply.)

- A. Intranet
- B. DMZ
- C. EGP
- D. Stateless network
- E. Perimeter network

F. Screened subnet - answer B, E, F. Servers that must be accessible both from the internal network and from the Internet are typically located in an area of the enterprise called a screened subnet, a perimeter network, or a demilitarized zone (DMZ). This area is separated from both the Internet and the internal network by firewalls, which prevents unauthorized Internet users from accessing the internal network. Intranet is another term for the internal network. Edge Gateway Protocol (EGP) is a type of routing protocol, and stateless is a type of firewall; neither apply to this definition.

Which of the following authentication protocols do Windows networks use for Active Directory Domain Services (AD DS) authentication of internal clients?

- A. RADIUS
- B. WPA2
- C. Kerberos

D. EAP-TLS - answer C. Windows networks that use AD DS authenticate clients using the Kerberos protocol, in part because it never transmits passwords over the network, even in encrypted form. Remote Authentication Dial-In User Service (RADIUS) is an authentication, authorization, and accounting service for remote users connecting to a network. Windows does not use it for internal clients. WiFi Protected Access 2 (WPA2) is a security protocol used by wireless Local Area
