Special Session on Nonstandard Finite Difference Discretizations and Nonlinear Oscillations in honor of Ronald Mickens's 70th birthday held January 9-10, 2013 in San Diego, CA. Included are papers on design and analysis of discrete time and continuous time dynamical systems arising in the natural and engineering sciences in particular the design of robust nonstandard finite difference methods for solving continuous time ordinary and partial differential equation models the analytical and numerical study of models that undergo nonlinear oscillations as well as the design of deterministic and stochastic models for epidemiological and ecological processes. Some of the specific topics covered in the book include the analysis of deterministic and stochastic SIR type models the assessment of cost effectiveness of vaccination problems finite difference methods for oscillatory dynamical systems including the Schrödinger equation and Brusselator system the design of exact and elementary stable finite difference methods the study of a two patch model with Allee effects and disease modified fitness the study of the delay differential equation model with application to circadian rhythm and the application of some special functions in the solutions of some problems arising in the natural and engineering sciences. A notable feature of the book is the collection of some relevant open problems intended to help guide the direction of future research in the area.

Handbook of Ordinary Differential Equations Andrei D. Polyanin, Valentin F. Zaitsev, 2017-11-15 The Handbook of Ordinary Differential Equations: Exact Solutions, Methods and Problems is an exceptional and complete reference for scientists and engineers as it contains over 7,000 ordinary differential equations with solutions. This book contains more equations and methods used in the field than any other book currently available. Included in the handbook are exact asymptotic approximate analytical numerical symbolic and qualitative methods that are used for solving and analyzing linear and nonlinear equations. The authors also present formulas for effective construction of solutions and many different equations arising in various applications like heat transfer elasticity hydrodynamics and more. This extensive handbook is the perfect resource for engineers and scientists searching for an exhaustive reservoir of information on ordinary differential equations. *Subject Guide to Books in Print*, 1997 **El-Hi Textbooks and Serials in Print, 1996** R. Fečkan, JinRong Wang, Michal Pospíšil, 2017-11-07 This book presents fractional difference integral differential evolution equations and inclusions and discusses existence and asymptotic behavior of their solutions. Controllability and relaxed control results are obtained. Combining rigorous deduction with abundant examples it is of interest to nonlinear science researchers using fractional equations as a tool and physicists mechanics researchers and engineers studying relevant topics. SIAM Journal on Computing Society for Industrial and Applied Mathematics, 1999 **American Book Publishing Record**, 2003 **Parametric State Space Structuring** Gianfranco Ciardo, Institute for Computer Applications in Science and Engineering, 1997 Abstract Structured approaches based on Kronecker operators for the description and solution of the infinitesimal generator of a continuous time Markov chains are receiving increasing interest However their main advantage a substantial reduction in the memory requirements during the numerical solution comes at a price Methods based on the potential state space allocate a probability vector that might be much larger than actually needed Methods based on the actual state space instead have an additional logarithmic overhead We present an approach that realizes the advantages of both methods with none of their disadvantages by partitioning the local state spaces of each submodel We apply our results to a model of software rendezvous and show how they reduce memory requirements while at the same time improving the efficiency of the computation **Publications of the Faculty** Arizona State University, 1972
