BIOLOGY: Chapter 6-9

Directions: Use your notes and book to answer the following questions concerning Replication, Transcription, and Protein Synthesis.

1. Define the following terms:

- a. **Replication**- the act of copying something, almost identical, in dna
the first of several steps of DNA based gene expression in which a particular segment of DNA is copied into RNA by the enzyme RNA polymerase
- b. **Transcription**-
- c. **Translation**- translation is the process in which ribosomes in the cytoplasm or endoplasmic reticulum synthesize proteins after the process of transcription of DNA to RNA in the cell's nucleus

Shiffman, 2019-11-27

This book presents the latest advances in the field of regenerative medicine in plastic surgery. It is the first authoritative reference documenting all the ways that plastic surgical practice and regenerative medicine science overlap or provide a road map for the future of both specialties. The Editors have provided a valuable service by gathering in one place the leading voices in these two fields in clear and concise manner. The first part introduces readers to essential principles of skin and soft tissue regeneration e.g. the possibility of using mesenchymal stem cells for wound healing. Since bone serves as a supportive tissue in most of the body, bone regeneration is an important aspect of regenerative medicine; accordingly, the second part discusses the novel bone implants, activated bone grafts, and bone tissue engineering. The book's third part, focusing on cartilage regeneration, includes chapters on e.g. stem cells and ear regeneration. In turn, part four addresses muscle and tendon regeneration from tendon to bone and tendon to muscle, as well as aging in the realm of muscle regeneration. Lastly, part five highlights nerve regeneration, deepening surgeons' knowledge to help them successfully treat injuries to the peripheral neural system. Written by leading experts, this book is an invaluable resource for researchers, students, beginners, and experienced clinicians in a range of specialties. With beautiful clinical images and artwork, this book will be a central companion to both practicing plastic surgeons who wish to remain abreast of oncoming technologic advances and regenerative medicine researchers who wish to understand the current state of the art of surgical reconstruction. Gurtner MD FACS, Johnson and Johnson Distinguished Professor of Surgery, Professor by courtesy of Bioengineering and Materials Science, Inaugural Vice Chairman of Surgery for Innovation, Stanford University School of Medicine.
