Down Syndrome: From Understanding the Neurobiology to Therapy Mara Dierssen, Rafa de la Torre, 2012-06-19 Down syndrome DS is the most common example of neurogenetic aneuploid disorder leading to mental retardation In most cases DS results from an extra copy of chromosome 21 HSA21 producing deregulated gene expression in brain that gives raise to subnormal intellectual functioning The topic of this volume is of broad interest for the neuroscience community because it tackles the concept of neurogenomics that is how the genome as a whole contributes to a neurodevelopmental cognitive disorders such as DS and thus to the development structure and function of the nervous system This volume of Progress in Brain Research discusses comparative genomics gene expression atlases of the brain network genetics engineered mouse models and applications to human and mouse behavioral and cognitive phenotypes It brings together scientists of diverse backgrounds by facilitating the integration of research directed at different levels of biological organization and by highlighting translational research and the application of the existing scientific knowledge to develop improved DS treatments and cures Leading authors review the state of the art in their field of investigation and provide their views and perspectives for future research Chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered All chapters include comprehensive background information and are written in a clear form that is also accessible to the non specialist

Burack, Jamie Edgin, Leonard Abbeduto, 2023 The chapter traces some key historical developments in the field of Down syndrome After describing general issues of classification in intellectual disabilities we describe Langdon Down's identification of the syndrome in the 1860s the movement to name the syndrome after Down the identification of trisomy 21 as the syndrome's cause and the beginnings of sustained research attention to the syndrome We end with a glimpse into the future discussing issues of longer life spans more integrated lives and the roles of families organizations and self advocates Working together researchers practitioners and individuals and their families can all continue to advance the lives of persons with Down syndrome *Motivation*, 2016-10-28 Motivation Theory Neurobiology and Applications is inspired by a question central to health care professionals teachers parents and coaches alike How can an individual be motivated to perform a given activity or training It presents novel measurements of motivation developed in psychology and economics recent insights into the neurobiology of motivation and current research on applications designed to boost motivation in neurorehabilitation education and sports In addition tactics on how to connect these different research and knowledge fields within a common theoretical framework of motivation is discussed Thus in short the book provides an integrative interdisciplinary up to date accounting on the neurobiology of motivation and how it might be boosted Provides an integration of the neurosciences their clinical challenges and applicable research Includes both an interdisciplinary and integrative nature Contains a broad array of subject matter that will be of interest to a large target audience Presents contributions from experts in their respective fields **Sensorimotor Rehabilitation**, 2015-04-14 This volume of Progress in Brain Research focuses on Sensorimotor Rehabilitation This well established international series examines major areas of basic and clinical research within neuroscience as well as emerging subfields **Computational Neurostimulation**, 2015-11-16 Computational Neurostimulation the latest volume in the Progress in Brain Research series provides an introduction to a nascent field with contributions from leading researchers In addition it addresses a very timely and relevant issue which has long been known to require more treatment Part of a well established international series that examines major areas of basic and clinical research within neuroscience as well as emerging subfields Provides an introduction to a nascent field with contributions from leading researchers **The Connected Hippocampus**, 2015-06-11 This volume of Progress in Brain Research focuses on the Connected Hippocampus This well established international series examines major areas of basic and clinical research within neuroscience as well as emerging subfields *Recent Advances in Alzheimer Research* Ahmad Salehi, Michael Rafii, Cristy Phillips, 2015-11-11 Recent Advances in Alzheimer Disease Research is a book

series focusing on contemporary research on Alzheimer's disease epidemiology pathophysiology diagnosis and therapy The series features reviews by experts in neuroscience and aims to provide current information in the field to both researchers and clinicians Down syndrome is a chromosomal disorder affecting more than 5.8 million individuals worldwide Down syndrome can be viewed as a complex multi system disorder as it manifests into significant physical psychological and cognitive abnormalities in affected persons With aging most adults with Down syndrome develop the clinical and neuropathological hallmarks of Alzheimer's disease Unfortunately no extant treatments have proven beneficial for cognitive dysfunction for either Down syndrome or Alzheimer's disease An incomplete understanding of the common pathogenic mechanisms that link these two disorders has limited researchers progress to this end Common Pathogenic Mechanisms between Down syndrome and Alzheimer's Disease Steps toward Therapy is a novel attempt to fill this void by summarizing the work of world renowned scientists in the field of Alzheimer's disease and Down syndrome and thus providing an unprecedented opportunity to attract attention to Down syndrome as a tool for understanding the common molecular mechanisms that underlie Alzheimer's disease and to develop new therapies for similar neurodegenerative disorders of the brain The book covers the fundamental pathophysiology and molecular mechanisms behind the incidence of Alzheimer's disease in Down syndrome affected individuals as well other key topics such as diagnosis and management in vivo brain imaging studies and progressive neurodegeneration of the monoaminergic system The book concludes with a review of recent clinical trials of drugs designed to mitigate cognitive dysfunction in aging adults with Down syndrome and establishes a scientific warrant for the increased testing of candidate pharmacotherapies Common Pathogenic Mechanisms between Down syndrome and Alzheimer's Disease Steps toward Therapy is a useful reference clinicians involved in treating Down syndrome patients as well as for neuroscience researchers seeking to understand the influence of a specific case of aneuploidy on Alzheimer's disease incidence and its progression at the molecular level
