## 1.0 What is RADIUS?

RADIUS, which stands for "Remote Authentication Dial In User Service", is a network protocol - a system that defines rules and conventions for communication between network devices - for remote user authentication and accounting. Commonly used by Internet Service Providers (ISPs), cellular network providers, and corporate and educational networks, the RADIUS protocol serves three primary functions:

- Authenticates users or devices before allowing them access to a network
- Authorizes those users or devices for specific network services
- Accounts for and tracks the usage of those services

For a detailed look at how RADIUS performs these functions, see section 2.2, "The RADIUS Session Process", on page 11.

### 1.0.1 History

In 1991, Merit Network, a non-profit internet provider, required a creative way to manage dial-in access to various Points-Of-Presence (POPs) across its network. In response to this need, RADIUS was created by Livingston Enterprises.

At the time RADIUS was created, network access systems were distributed across a wide area and were run by multiple independent organizations. Central administrators wanted to prevent problems with security and scalability, and thus did not want to distribute user names and passwords; instead, they wanted the remote access servers to contact a central server to authorize access to the requested system or service. In response to contact from the remote access server, the central server would return a "success" or "failure" message, and the remote machines would be in charge of enforcing this response for each end user.

The goal of RADIUS was, therefore, to create a central location for user authentication, wherein users from many locations could request network access.

The simplicity, efficiency, and usability of the RADIUS system led to its widespread adoption by network equipment vendors, to the extent that currently, RADIUS is considered an industry standard and is also positioned to become an Internet Engineering Task Force (IETF) standard.
