Foundations of Animal Behavior Lynne D. Houck, Lee C. Drickamer, 1996-08. Beginning with Darwin's work in the 1870s Foundations of Animal Behavior selects the most important works from the discipline's first hundred years: forty-four classic papers and presents them in facsimile tracing the development of the field. These papers are classics because they either founded a line of investigation established a basic method or provided a new approach to an important research question. The papers are divided into six sections each introduced by prominent researchers. Sections one and two cover the origins and history of the field and the emergence of basic methods and approaches. They provide a background for sections three through six which focus on development and learning neural and hormonal mechanisms of behavior sensory processes orientation and communication and the evolution of behavior. This outstanding collection will serve as the basis for undergraduate and graduate seminars and as a reference for researchers in animal behavior whether they focus on ethology behavioral ecology comparative psychology or anthropology.
