such as the Julia and Mandelbrot sets in the beautiful books by Heinz Otto Peigen and his co workers Now the new theory of critical curves developed by Mira and his students and Toulouse provide a unique opportunity to explain the basic concepts of the theory of chaos and bifurcations for discrete dynamical systems in two dimensions The materials in the book and on the accompanying disc are not solely developed only with the researcher and professional in mind but also with consideration for the student The book is replete with some 100 computer graphics to illustrate the material and the CD ROM contains full color animations that are tied directly into the subject matter of the book itself In addition much of this material has also been class tested by the authors The cross platform CD also contains a software program called ENDO which enables users to create their own 2 D imagery with X Windows Maple scripts are provided which give the reader the option of working directly with the code from which the graphics in the book were

Discovering Dynamical Systems Through

Experiment and Inquiry Thomas LoFaro, Jeff Ford, 2021-03-22 Discovering Dynamical Systems Through Experiment and Inquiry differs from most texts on dynamical systems by blending the use of computer simulations with inquiry based learning IBL IBL is an excellent tool to move students from merely remembering the material to deeper understanding and analysis This method relies on asking students questions first rather than presenting the material in a lecture Another unique feature of this book is the use of computer simulations Students can discover examples and counterexamples through manipulations built into the software These tools have long been used in the study of dynamical systems to visualize chaotic behavior We refer to this unique approach to teaching mathematics as ECAP Explore Conjecture Apply and Prove ECAP was developed to mimic the actual practice of mathematics in an effort to provide students with a more holistic mathematical experience In general each section begins with exercises guiding students through explorations of the featured concept and concludes with exercises that help the students formally prove the results While symbolic dynamics is a standard topic in an undergraduate dynamics text we have tried to emphasize it in a way that is more detailed and inclusive than is typically the case Finally we have chosen to include multiple sections on important ideas from analysis and topology independent from their application to dynamics
