Algebra and Geometry with Python Sergei Kurgalin, Sergei Borzunov, 2021-01-18 This book teaches algebra and geometry. The authors dedicate chapters to the key issues of matrices, linear equations, matrix algorithms, vector spaces, lines, planes, second-order curves, and elliptic curves. The text is supported throughout with problems, and the authors have included source code in Python in the book. The book is suitable for advanced undergraduate and graduate students in computer science.

New Trends in Intelligent Software Methodologies, Tools and Techniques Ali Selamat, Sigeru Omatu, 2017-09-15 Software is an essential enabler for science and the new economy. It creates new markets and directions for a more reliable, flexible, and robust society and empowers the exploration of our world in ever more depth, but it often falls short of our expectations. Current software methodologies, tools, and techniques are still neither robust nor reliable enough for the constantly evolving market, and many promising approaches have so far failed to deliver the solutions required. This book presents the keynote, Engineering Cyber Physical Systems, and 64 peer-reviewed papers from the 16th International Conference on New Trends in Intelligent Software Methodology, Tools and Techniques, SoMeT_17, held in Kitakyushu, Japan, in September 2017, which brought together researchers and practitioners to share original research results and practical development experience in software science and related new technologies. The aim of the SoMeT conferences is to capture the essence of the new state of the art in software science and its supporting technology and to identify the challenges such technology will have to master. The book explores new trends and theories which illuminate the direction of developments in this field and will be of interest to anyone whose work involves software science and its integration into tomorrow's global information society.

A Practical Approach to High-Performance Computing Sergei Kurgalin, Sergei Borzunov, 2019-11-10 The book discusses the

fundamentals of high performance computing The authors combine visualization comprehensibility and strictness in their material presentation and thus influence the reader towards practical application and learning how to solve real computing problems They address both key approaches to programming modern computing systems multithreading based parallelizing in shared memory systems and applying message passing technologies in distributed systems The book is suitable for undergraduate and graduate students and for researchers and practitioners engaged with high performance computing systems Each chapter begins with a theoretical part where the relevant terminology is introduced along with the basic theoretical results and methods of parallel programming and concludes with a list of test questions and problems of varying difficulty The authors include many solutions and hints and often sample code

HELLA,2017-04-15 **Discrete Mathematics with Applications** William Barnier,Jean B. Chan,1989 Designed to provide a strong mathematics background for computer science engineering and mathematics students Topics in the text are drawn from logic Boolean algebra combinatorics automata and graph theory A chapter on automata theory and formal languages is included along with programming notes using Pascal language constructions to show how programming and mathematics are related Logic is introduced briefly in chapter one and then expanded upon in chapter four **Discrete Mathematics with Applications** Susanna S. Epp,2004 Susanna Epp s DISCRETE MATHEMATICS THIRD EDITION provides a clear introduction to discrete mathematics Renowned for her lucid accessible prose Epp explains complex abstract concepts with clarity and precision This book presents not only the major themes of discrete mathematics but also the reasoning that underlies mathematical thought Students develop the ability to think abstractly as they study the ideas of logic and proof While learning about such concepts as logic circuits and computer addition algorithm analysis recursive thinking computability automata cryptography and combinatorics students discover that the ideas of discrete mathematics underlie and are essential to the science and technology of the computer age Overall Epp s emphasis on reasoning provides students with a strong foundation for computer science and upper level mathematics courses Forthcoming Books Rose Army,2003

Stability and Bifurcation Theory for Non-Autonomous Differential Equations Anna Capietto,Peter Kloeden,Jean Mawhin,Sylvia Novo,Miguel Ortega,2012-12-14 This volume contains the notes from five lecture courses devoted to nonautonomous differential systems in which appropriate topological and dynamical techniques were described and applied to a variety of problems The courses took place during the C I M E Session Stability and Bifurcation Problems for Non Autonomous Differential Equations held in Cetraro Italy June 19 25 2011 Anna Capietto and Jean Mawhin lectured on nonlinear boundary value problems they applied the Maslov index and degree theoretic methods in this context Rafael Ortega discussed the theory of twist maps with nonperiodic phase and presented applications Peter Kloeden and Sylvia Novo showed how dynamical methods can be used to study the stability bifurcation properties of bounded solutions and of

attracting sets for nonautonomous differential and functional differential equations The volume will be of interest to all researchers working in these and related fields

Parametric State Space Structuring Gianfranco Ciardo,Institute for Computer Applications in Science and Engineering,1997 Abstract Structured approaches based on Kronecker operators for the description and solution of the infinitesimal generator of a continuous time Markov chains sic are receiving increasing interest However their main advantage a substantial reduction in the memory requirements during the numerical solution comes at a price Methods based on the potential state space allocate a probability vector that might be much larger than actually needed Methods based on the actual state space instead have an additional logarithmic overhead We present an approach that realizes the advantages of both methods with none of their disadvantages by partitioning the local state spaces of each submodel We apply our results to a model of software rendezvous and show how they reduce memory requirements while at the same time improving the efficiency of the computation
