Introduction to Reliable and Secure Distributed Programming Christian Cachin, Rachid Guerraoui, Luís Rodrigues, 2011-02-11 In modern computing a program is usually distributed among several processes The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task even when some of these processes fail Failures may range from crashes to adversarial attacks by malicious processes Cachin Guerraoui and Rodrigues present an introductory description of fundamental distributed programming abstractions together with

algorithms to implement them in distributed systems where processes are subject to crashes and malicious attacks The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging environments Each core chapter is devoted to one topic covering reliable broadcast shared memory consensus and extensions of consensus For every topic many exercises and their solutions enhance the understanding This book represents the second edition of Introduction to Reliable Distributed Programming Its scope has been extended to include security against malicious actions by non cooperating processes This important domain has become widely known under the name Byzantine fault tolerance

Database Internals Alex Petrov, 2019-09-13 When it comes to choosing using and maintaining a database understanding its internals is essential But with so many distributed databases and tools available today it s often difficult to understand what each one offers and how they differ With this practical guide Alex Petrov guides developers through the concepts behind modern database and storage engine internals Throughout the book you ll explore relevant material gleaned from numerous books papers blog posts and the source code of several open source databases These resources are listed at the end of parts one and two You ll discover that the most significant distinctions among many modern databases reside in subsystems that determine how storage is organized and how data is distributed This book examines Storage engines Explore storage classification and taxonomy and dive into B Tree based and immutable Log Structured storage engines with differences and use cases for each Storage building blocks Learn how database files are organized to build efficient storage using auxiliary data structures such as Page Cache Buffer Pool and Write Ahead Log Distributed systems Learn step by step how nodes and processes connect and build complex communication patterns Database clusters Which consistency models are commonly used by modern databases and how distributed storage systems achieve consistency

Introduction to Choreographies Fabrizio Montesi, 2023-05-25 In concurrent and distributed systems processes can complete tasks together by playing their parts in a joint plan The plan or protocol can be written as a choreography a formal description of overall

behaviour that processes should collaborate to implement like authenticating a user or purchasing an item online Formality brings clarity but not only that Choreographies can contribute to important safety and liveness properties This book is an ideal introduction to theory of choreographies for students researchers and professionals in computer science and applied mathematics It covers languages for writing choreographies and their semantics and principles for implementing choreographies correctly The text treats the study of choreographies as a discipline in its own right following a systematic approach that starts from simple foundations and proceeds to more advanced features in incremental steps Each chapter includes examples and exercises aimed at helping with understanding the theory and its relation to practice Computer Science Research Trends Casey B. Yarnall,2008 Like them or hate them computers are here to stay The books in this series present leading edge research in the field of computer research technology and applications Each contribution has been carefully selected for inclusion based on the significance of the research to this fast moving and diverse field

group communication systems Chapter six introduces the distributed consensus problem and covers a number of Paxos family algorithms in depth The Byzantine generals problem and its latest solutions including the seminal Practical Byzantine Fault Tolerance PBFT algorithm and a number of its derivatives are introduced in chapter seven The final chapter details the latest research results surrounding application aware Byzantine fault tolerance which represents an important step forward in the practical use of Byzantine fault tolerance techniques The Dilemma of Coalition Instability in Consensual

Nonmonogamy James K. Beggan, 2020-11-18 Different forms of consensual nonmonogamy such as polyamory and swinging have achieved greater prominence in daily conversation and representation in mass media Although advocates recognize that the presence of additional people creates difficulties the author argues that this greater complexity may lead to unavoidable instability Drawing from classic work by Georg Simmel as well as modern research in the social sciences James K Beggan considers how the presence of a third person is what allows the formation of coalitions which then become part of the process that can break apart the triad This paradox explained with reference to game theory and social interdependence represents the existential threat to the quest for consensual nonmonogamy Beggan describes how psychological processes involving social comparison and gender and sexual orientation can limit the formation of certain types of coalitions which in turn influence which relationships can be expected to emerge in the context of consensual nonmonogamy His analysis includes macro level social issues related to establishing consensual nonmonogamy as a valid social identity and alternative to conventional marriage Using insights from game theory he suggests possible meta solutions to coalition conflicts that emerge in triadic romantic and sexual relationships **Data Spaces** Edward Curry, Simon Scerri, Tuomo Tuikka, 2022-09-08
