

DO-254 for the FPGA Designer

By: Dagan White

The standard that governs the design of avionic components and systems, DO-254, is one of the most poorly understood but widely applicable standards in the avionic industry. While information on the general aspects of the standard is easy to obtain, the details of exactly how to implement the standard are sketchy. And once an entity develops a process that achieves compliance, the details of how compliance was achieved become part of the intellectual property of that entity. This white paper focuses on the details of developing a DO-254 compliant process for the design of FPGAs.

Crowdsourcing and Probabilistic Decision-Making in Software Engineering: Emerging Research and Opportunities Gupta, Varun, 2019-08-30 With today's technological advancements the evolution of software has led to various challenges regarding mass markets and crowds. High quality processing must be capable of handling large groups in an efficient manner without error. Solutions that have been applied include artificial intelligence and natural language processing but extensive research in this area has yet to be undertaken. Crowdsourcing and Probabilistic Decision Making in Software Engineering: Emerging Research and Opportunities is a pivotal reference source that provides vital research on the application of crowd based software engineering and supports software engineers who want to improve the manner in which software is developed by increasing the accuracy of probabilistic reasoning to support their decision making and getting automation support. While highlighting topics such as modeling techniques and programming practices this publication is ideally designed for software developers, software engineers, computer engineers, executives, professionals and researchers.

Civil Aircraft Electrical Power System Safety Assessment Peng Wang, 2017-06-12 Civil Aircraft Electrical Power System Safety Assessment: Issues and Practices provides guidelines and methods for conducting a safety assessment process on civil airborne systems and equipment. As civil aircraft electrical systems become more complicated, electrical wiring failures have become a huge concern in industry and government, especially on aging platforms. There have been several accidents, most recently battery problems on the Boeing 777, with some of these having a relationship to wiring and power generation. Featuring a case study on the continuous safety assessment process of the civil airborne electrical power system, this book addresses problems, issues and troubleshooting techniques such as single event effects, SEE, the failure effects of electrical wiring, interconnection systems, EWIS, formal theories and safety analysis methods in civil aircrafts. Introduces how to conduct assignment of development assurance levels for the electrical power system. Includes safety assessments of aging platforms and their respective Electrical Wiring Interconnection System (EWIS). Features material on failure mechanisms for wiring systems and discussion of Failure Modes and Effects Analysis (FMEA) sustainment.

FPGA Design Automation Deming Chen, Jason Cong, Peichen Pan, 2006 FPGA Design Automation: A Survey is an up to date comprehensive survey/tutorial of FPGA design automation with an emphasis on the recent developments within the past 5 to 10 years. The focus is on the theory and techniques that have been or most likely will be reduced to practice. It covers all major steps in FPGA design: flow, routing and placement, circuit clustering, technology mapping and architecture specific optimization, physical synthesis, RT level and behavior level synthesis and power optimization. FPGA Design Automation: A Survey can be used as both a guide for beginners who are embarking on research in this relatively young yet exciting area and a useful reference for established researchers in this field.
