Modern Land Drainage Willem Vlotman, Lambert Smedema, David Rycroft, 2020-05-07 Modern Land Drainage 2nd edition is a fully revised and updated edition of the 2004 edition Modern Land Drainage describes traditional drainage formulas Hooghoudt Kirkham Donnan Ernst Glover Dumm for rainfed agriculture in the humid temperature zone Significant parts are devoted to drainage for salinity control of irrigated land in semi arid zones and to drainage of rice land in the humid tropics Institutional management and maintenance aspects are extensively covered as well as the mitigation of adverse impacts of drainage interventions on the environment The latest computer applications for drainage design in the context of integrated water management are described DRAINMOD HEC SWAP etc Field surveys are executed by governments with the aid of consultants but rarely are the end stakeholders i e farmers and general public involved from inception to planning to execution of a drainage system Yet during the Operation Management and Maintenance OMM phase of a water management system they are expected to takeover run bear and be responsible for the costs of OMM The book describes successful methodologies and processes to be followed for engagement of stakeholders at all levels from government to farm from minister to farmer and from beginning to end The book covers all aspects needed for sustainable drainage The latest survey methodologies with satellites and drones are suggested to assess cause and effect Waterlogging and salinity are the effect of something caused most likely upstream of the drainage problem location Hence treating the cause may be more cost effective Triple Bottom Line social environmental and financial considerations and the water food energy nexus are an integral part of the drainage design process Controlled drainage i e the balance of removal and conservation of drainage water and minimising solute transport as low as reasonably achievable ALARA principle is extensively described This work is intended for use both as a university level textbook and as a

professional handbook it is of particular value to professionals engaged in drainage development in the context of integrated water resources and river basin management civil and agricultural engineers government officials university students and libraries , , *Evaluation of Drainage for Salinity Control in Grand Valley* Gaylord V. Skogerboe, 1974 **Reservoir Engineering** Sylvester Okotie, Bibobra Ikporo, 2018-11-22 This book provides a clear and basic understanding of the concept of reservoir engineering to professionals and students in the oil and gas industry The content contains detailed explanations of key theoretic and mathematical concepts and provides readers with the logical ability to approach the various challenges encountered in daily reservoir field operations for effective reservoir management Chapters are fully illustrated and contain numerous calculations involving the estimation of hydrocarbon volume in place current and abandonment reserves aquifer models and properties for a particular reservoir field the type of energy in the system and evaluation of the strength of the aquifer if present The book is written in oil field units with detailed solved examples and exercises to enhance practical application It is useful as a professional reference and for students who are taking applied and advanced reservoir engineering courses in reservoir simulation enhanced oil recovery and well test analysis **Model Predictive Control on Open Water Systems** Peter-Jules van Overloop, 2006 In the research Model Predictive Control on Open Water Systems the relatively new control methodology Model Predictive Control is configured for application of water quantity control on open water systems especially on irrigation canals and large drainage systems The methodology applies an internal model of the open water system by which optimal control actions are calculated over a prediction horizon As internal model two simplified models are used the Integrator Delay model and the Saint Venant model Kalman filtering is applied to initialize the internal models The optimization uses an objective function in which conflicting objectives can be weighed In most of the cases these conflicting objectives are keeping the water levels at different locations in the water system within a range around setpoint and executing this by using as little control effort or energy as possible River Training Techniques R. Blazejewski, K.W. Pilarczyk, B. Przedwojski, 1995-01-01 This text covers river training techniques Divided into two parts it discusses properties of rivers and fundamentals of river engineering and flood protection *Materials for Subsurface Land Drainage Systems* L. C. P. M. Stuyt, W. Dierickx, J. Martínez Beltrán, 2005-01-01 Reliable subsurface drainage systems for groundwater table and salinity control are needed to maintain or enhance the productivity of irrigated lands and to contribute to the rural development of lowlands in the humid tropic This publication presents guidelines to assess the need for envelopes and for the selection of appropriate materials i e pipes and envelopes for the proper and lasting performance of subsurface drainage systems In addition it also contains guidelines for adequate installation and maintenance of drainage materials as well as the required specifications and standards of such materials which may be used in tender documents for implementation of subsurface drainage works Practical guidelines for the implementation of laboratory and field investigations to evaluate the performance of drainage materials have also been included Publisher s description Catalog Pennsylvania State
