Agroecology, Ecosystems and Sustainability in the Tropics G. Poyyamoli, 2017-06-26 Tropical ecosystems are some of the most biologically and ecologically diverse in the world Traditional local agroecosystems in the tropics reflect this diversity and provide excellent examples of how nature can be used as the model for designing and managing sustainable agroecosystems This book brings together such examples Using an agroecological approach the collection of chapters demonstrates how agroecology must simultaneously be a science a practice and a movement for social change towards a paradigm of sustainability that engages all parts of the food system from the field to the table Chapter contributors were selected from multiple countries and backgrounds providing a valuable diversity of approaches and knowledge systems and the interaction of these systems gives this book the important transdisciplinarity that has become a key component of

agroecology Working across disciplines and knowledge systems is necessary in order to link the multiple components of food systems that promote effective change As food systems return to the diversity complexity and resilience they once had it is collections of experiences as presented in this book that provide examples of the path we must be on Steve Gliessman Professor Emeritus of Agroecology University of California Santa Cruz USA Enhancing Resilience of Dryland Agriculture Under Changing Climate Anandkumar Naorem, Deepesh Machiwal, 2023-03-09 This contributed volume describes management practices based on interdisciplinary and convergence science approaches from different disciplines of agricultural science to enhance the resilience of dryland agriculture The main focus of this book is to address the current issues and trends along with future prospects and challenges in adopting salient agricultural management practices in drylands globally under a climate change scenario Climate change and global warming have profound repercussions on increasing frequency severity and duration of droughts and or floods which may have implications for future productivity of dryland agriculture e g more water shortages or abundances and high or low runoff rates diminished crop yields and reduced water productivity In past few years many technological advancements and management strategies have been evolved to tackle the climate induced risks of dryland agriculture considering interdisciplinary and convergence approaches that integrate knowledge from multi disciplines This book is an attempt to bridge the gap in literature by unraveling controversies and characteristics of dryland ecosystems under the changing climate and dealing with detailed procedures of applying the advanced practices adapted to climate change for management of dryland agriculture This edited book is of interest to ecologists economists environmentalists geologists horticulturalists hydrologists soil scientists social scientists natural resource conservationists and policy makers dealing with dryland agriculture This book offers a broad understanding of dryland agriculture and assists the reader to identify both the current as well as the probable future state of dryland agriculture in a global context

Agriculture in Dry Lands I. Arnon, 2012-12-02 Throughout history man has by over use consistently reduced the productive capacity of dry lands This degradation of one third of the land area of the globe is unfortunately increasing In recent years world interest has turned to the problems of pollution of the environment and the impending food shortage as world population grows explosively Thus the attention of international and other agricultural bodies has turned to the need for preserving and developing more effectively the agricultural potential of these areas This book provides a comprehensive review of present knowledge of the agriculture of dry lands with special emphasis on measures for conserving their natural resources Management practices are described which aim at optimizing productivity of rainfed and irrigated agriculture without adverse effects on sustainability Land use in the dry regions and its evolution throughout history is described and analysed and the lessons to be learnt from destructive technologies are stressed In particular current proposals for an alternative agriculture are discussed and their justification is questioned This is a generalist work which specialists can also find interesting not only in their own discipline but as a concise way of acquainting themselves with the state of the art in associated fields Increasing specialisation with each discipline using its own vocabulary leads inevitably to communication problems and the need for multi disciplinary teams makes inter discipline communication indispensable **Management of**

Soil Problems Khan Towhid Osman, 2018-05-03 Soils are neither good nor bad but some have inherent or acquired characteristics that may or may not suit our intended use Unsuitable characteristics are considered to be soil problems soil constraints or soil limitations Only twelve percent of global land is right for agricultural production without much limitation Some soils have severe limitations for crop production These soils are so called problem soils Many of them do not have enough fertility to be productive some are arid and saline some are very sandy and dry and some are wet and waterlogged for most of the growing season The global demand for food wood fuel fiber medicine and other plant products for the 7.2 billion current world population has created such an immense pressure on global soil resources that even the most fertile soils are losing their productive capacity We are being compelled to bring more and more unsuitable or marginally suitable soils under cultivation Unless innovative and integrated soil crop and environmental management practices are adopted for their improvement and sustainable use further degradation is inevitable This book Management of Soil Problems identifies the problems and discusses management options in a smooth and reader friendly style It will be useful for students and professionals of soil science agriculture forestry geography and environmental sciences Sustainable and Innovative
