Knowledge Representation And Reasoning:

Knowledge Representation and Reasoning Ronald Brachman, Hector Levesque, 2004-06-17 Knowledge representation is at the very core of a radical idea for understanding intelligence. Instead of trying to understand or build brains from the bottom up, its goal is to understand and build intelligent behavior from the top down, putting the focus on what an agent needs to know in order to behave intelligently. How this knowledge can be represented symbolically and how automated reasoning procedures can make this knowledge available as needed. This landmark text takes the central concepts of knowledge representation developed over the last 50 years and illustrates them in a lucid and compelling way. Each of the various styles of representation is presented in a simple and intuitive form, and the basics of reasoning with that representation are explained in detail. This approach gives readers a solid foundation for understanding the more advanced work found in the research literature. The presentation is clear enough to be accessible to a broad audience, including researchers and practitioners in database management, information retrieval, and object-oriented systems, as well as artificial intelligence. This book provides the foundation in knowledge representation and reasoning that every AI practitioner needs. Authors are well-recognized experts in the field who have applied the techniques to real-world problems. Presents the core ideas of KR & R in a simple, straight-forward approach, independent of the quirks of research systems. Offers the first true synthesis of the field in over a decade. **Principles of Knowledge Representation and Reasoning** James Allen, Richard E.

Fikes, Erik Sandewall, 1991. The proceedings of the Second International Conference on title held in Cambridge, Massachusetts, April 1991, comprise 55 papers on topics including the logical specifications of reasoning behaviors and representation formalisms, comparative analysis of competing algorithms and formalisms, and an **Readings in**

Knowledge Representation Ronald J. Brachman, Hector J. Levesque, 1985. In Artificial Intelligence, it is often said that the representation of knowledge is the key to the design of robust intelligent systems. In one form or another, the principles of Knowledge Representation are fundamental to work in natural language processing, computer vision, knowledge-based expert systems, and other areas. The papers reprinted in this volume have been collected to allow the reader with a general technical background in AI to explore the subtleties of this key subarea. These seminal articles, spanning a quarter century of research, cover the most important ideas and developments in the representation field. The editors introduce each paper, discuss its relevance and context, and provide an extensive bibliography of other work. **Readings in Knowledge Representation** is intended to serve as a complete sourcebook for the study of this crucial subject. **Principles of Knowledge**

Carlson, 2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time The present volume provides a collection of studies that focus on some of the central problems within the domain of artificial intelligence These difficulties fall into four principal areas defeasible reasoning including the frame problem as apart ordinary language and the representation problems that it generates the revision of beliefs and its rules of inference and knowledge representation and the logical problems that are encountered there These papers make original contributions to each of these areas of inquiry and should be of special interest to those who understand the crucial role that is played by questions of logical form They vividly illustrate the benefits that can emerge from collaborative efforts involving scholars from linguistics philosophy computer science and AI J H F

The Knowledge Frontier Nick Cercone, Gordon McCalla, 2012-12-06 Knowledge representation is perhaps the most central problem confronting artificial intelligence Expert systems need knowledge of their domain of expertise in order to function properly Computer vision systems need to know characteristics of what they are seeing in order to be able to fully interpret scenes Natural language systems are invaluable aided by

knowledge of the subject of the natural language discourse and knowledge of the participants in the discourse Knowledge can guide learning systems towards better understanding and can aid problem solving systems in creating plans to solve various problems Applications such as intelligent tutoring computer aided VLSI design game playing automatic programming medical reasoning diagnosis in various domains and speech recognition to name a few are all currently experimenting with knowledge based approaches The problem of knowledge representation breaks down into several subsidiary problems including what knowledge to represent in a particular application how to extract or create that knowledge how to represent the knowledge efficiently and effectively how to implement the knowledge representation scheme chosen how to modify the knowledge in the face of a changing world how to reason with the knowledge and how to use the knowledge appropriately in the creation of the application solution This volume contains an elaboration of many of these basic issues from a variety of perspectives *Knowledge Representation and Reasoning Under Uncertainty* Michael Masuch, Laszlo Polos, 2014-01-15

Yulia Kahl,2014 **Knowledge Representation** Han Reichgelt,1991 Most researchers to date in artificial intelligence has been based on the knowledge representation hypothesis that is the assumption that in any artificial intelligence AI programme there is a separate module which represents the information that the programme has about the world As a result a number of so called knowledge representation formalisms have been developed for representing this kind of information in a computer The Logic of Knowledge Bases Hector Levesque, Gerhard Lakemeyer,2023-01-02 The idea of a knowledge base lies at the heart of symbolic or good old fashioned artificial intelligence GOFAI A knowledge based system decides how to act by running formal reasoning procedures over a body of explicitly represented knowledge its knowledge base The system is not programmed for specific tasks rather it is told what it needs to know and expected to infer the rest This book is about the logic of such knowledge bases It describes in detail the relationship between symbolic representations of knowledge and abstract states of knowledge exploring along the way the foundations of knowledge knowledge bases knowledge based systems and knowledge representation and reasoning Assuming some familiarity with first order predicate logic the book offers a rigorous

mathematical model of knowledge that is general and expressive yet more workable in practice than previous models The first edition of the book appeared in the year 2000 and since then its model of knowledge has been applied and extended in a number of ways This second edition incorporates a number of new results about the logic of knowledge bases including default reasoning reasoning about action and change and tractable reasoning Hector Levesque is Professor Emeritus in the Department of Computer Science University of Toronto Gerhard Lakemeyer is Professor and Chair of the Department of Computer Science RWTH Aachen University and Professor status only in the Department of Computer Science University of Toronto
