

Correlation of Rock Units

Where possible, a **rock unit** is correlated from one outcrop to the next by tracing it continuously over the intervening ground. If continuous tracing is not possible, the presence of the unit at the second outcrop can usually be discerned by some *characteristic feature*, such as rock type, color, bedding, or fossil content. Correlation is aided if the unit in question has a distinctive position in a sequence of rock units. For example, if a rock unit at one outcrop is underlain by black shale and overlain by red sandstone, it is likely to correlate with a unit having this same position at a second outcrop.

The following questions on correlation refer to the stratigraphic sections in Figure 8.2.

Study Questions

1. Rock Unit Y is labeled at Section 1. At which of the other sections is it present? Which of the methods described in the paragraph above did you use to make the correlation?

2. Rock Unit Q is labeled at Section 1. At which of the other sections is it present? Which of the methods described above did you use to make the correlation?

3. Rock Unit S is identified at Section 5. At which of the other sections is it present?

4. Is the peat at Section 5 most probably correlative with Unit P, or Unit G?

Correlation of Time-Rock Units

A **time-rock unit** consists of an assemblage of strata deposited during a particular interval of time. An ideal example of a time plane, of the sort that bounds time-rock units, is the bottom of a body of water such as a lake. As shown in Figure 8.1A, several different kinds of sediment were being deposited on the bottom of the lake when it was drained, and the top of these is a stratigraphic time plane for the year A.D. 1920. Buried time planes are likely to correspond with bedding planes, but time planes usually cannot be traced very far. A time-rock unit is usually

correlated from place to place by its contained fossils, in particular those whose range, or known time span of existence, is restricted to a relatively short span of geologic time. In our example, the ranges of "fossils" characteristic of each time-rock unit are shown by arrows to the right of Section 1 in Figure 8.2.

Study Questions

1. Which rock unit(s) were accumulating at Sections 2 and 6 while Rock Unit Y was accumulating at Section 1?

2. Which rock unit(s) were accumulating at Sections 4 and 5 while Rock Unit Y was accumulating at Section 1?

3. Why is it probable that Rock Unit P was deposited at the same time at all the sections, even though it contains no guide fossils? (P is an example of a stratum that is both a rock unit and a time-rock unit.)

4. Draw dashed lines between Sections 6, 2, 1, and 5 to connect the time-equivalent rock units. These lines are the boundaries of time-rock units.

Inferred History of the Basin

For purposes of historical inference, observational data and correlations are organized in the form of stratigraphic sections (Fig. 8.2) and stratigraphic diagrams (Fig. 8.3). Another useful device is the lithofacies map, which shows the areal distribution of rock types in either a rock unit or a time-rock unit. The distribution of bottom sediments in Figure 8.1A is a **lithofacies** map for the top of a time-rock unit. It is also a **biofacies** map because it shows the areal distribution of organisms.

Study Questions

1. Why does Unit D contain only *J. firewateri* at Section 6 although it contains both *J. firewateri* and *B. breweri* at Section 2 (see Figs. 8.2 and 8.3)?

Laboratory Studies in Earth History James C. Brice, Harold L. Levin, Michael S. Smith, 1992 For most students reading from a textbook provides only a framework of knowledge The more comprehensive and perceptive grasp of a topic truly requires that one examines and answers thought provoking questions and seeks solutions to meaningful problems The authors goal in these studies is to provide such questions and pose such problems They hope the exercises will help students understand how ancient conditions can be read from rocks and fossils how geologic forces at the surface and within the planet can alter the environment and change world geography and how events of the past can be placed within an integrated chronological sequence The exercises are designed for students who may not intend to specialize in geology Pref
