

from the cell. Another common organelle is the _____. These green structures allow the euglena to carry out _____.

Now let's learn about some new organelles. First, you should be able to observe a red spot. This is called the _____ (also known as the _____). It helps the euglena detect sources of _____. It works by blocking some light sources so the euglena can tell which direction the brightest source is coming from. Second, you will notice long, rod-shaped parts. These are called the _____. They are similar to _____. They store _____ created during photosynthesis. Sometimes these appear as spots on or near the chloroplasts.

Before moving on, watch the videos to see how many parts you can identify.

Part Three - Labeling the Diagram
