The Gap The Science Of What Separates Us From Other Animals:

The Gap Thomas Suddendorf, 2013-11-12 There exists an undeniable chasm between the capacities of humans and those of animals Our minds have spawned civilizations and technologies that have changed the face of the Earth whereas even our closest animal relatives sit unobtrusively in their dwindling habitats Yet despite longstanding debates the nature of this apparent gap has remained unclear What exactly is the difference between our minds and theirs In The Gap psychologist Thomas Suddendorf provides a definitive account of the mental qualities that separate humans from other animals as well as how these differences arose Drawing on two decades of research on apes children and human evolution he surveys the abilities most often cited as uniquely human language intelligence morality culture theory of mind and mental time travel and finds that two traits account for most of the ways in which our minds appear so distinct Namely our open ended ability to imagine and reflect on scenarios and our insatiable drive to link our minds together These two traits explain how our species was able to amplify qualities that we inherited in parallel with our animal counterparts transforming animal communication into language memory into mental time travel sociality into mind reading problem solving into abstract reasoning traditions into culture and empathy into morality Suddendorf concludes with the provocative suggestion that our unrivalled status may be our own creation and that the gap is growing wider not so much because we are becoming smarter but because we are killing off our closest intelligent animal relatives Weaving together the latest findings in animal behavior child development anthropology psychology and neuroscience this book will change the way we think about our place in nature A major argument for reconsidering what makes us human The Gap is essential reading for anyone interested in our evolutionary origins and our relationship with the rest of the animal kingdom

The Science of Free Will Roy F. Baumeister, 2024 At first blush free will seems obvious Every day people have the experience of making decisions of choosing what to do Planning a meeting or date steering a car ordering from a menu accepting or declining an offer playing a game making a deal voting shopping and much more all these confront the person with multiple alternative possibilities People make choices fully aware that they could just as well choose differently

Aquinas, Science, and Human Uniqueness Mary L. Vanden Berg, 2022-12-15 What is a human being What makes humans special different from other creatures Or is a human just another animal Drawing on Scripture Aquinas and science this book seeks to articulate both why and how humans should be understood as special Despite amazing similarities to other creatures humans are physiologically psychologically and spiritually unique beings No other creatures not even angels have the unique combination of capacities nor the divine calling that humans have Vanden Berg argues that only humans are material spiritual intellectual worshipping beings created specifically for a personal relationship with their Creator and with the stated vocation of caring for God's world and representing God in it

The Comprehensive Guide to

Science and Faith William A. Dembski, Casey Luskin, Joseph M. Holden, 2021-10-05 Science and Faith Can and Do Support Each Other Science and Christianity are often presented as opposites when in fact the order of the universe and the complexity of life powerfully testify to intelligent design With this comprehensive resource that includes the latest research you ll witness how the findings of scientists provide compelling reasons to acknowledge the mind and presence of a creator Featuring more than 45 entries by top caliber experts you ll better understand how scientific concepts like intelligent design are supported by evidence the scientific findings that support the history and accounts found in the Bible the biases that lead to scientific information being presented as a challenge rather than a complement to Christianity Whether you re looking for answers to your own questions or seeking to explain the case for intelligent design to others The Comprehensive Guide to Science and Faith is an invaluable apologetic tool that will help you explore and analyze the relevant facts research and theories in light of biblical truth

A History of Anthropology as a Holistic Science Glynn Custred, 2016-04-27 A History of Anthropology as a Holistic Science defends the holistic scientific approach by examining its history which is in part a story of adventure and its sound philosophical foundation It shows that activism and the holistic scientific approach need not

compete with one another This book discusses how anthropology developed in the nineteenth century during what has been called the Second Scientific Revolution It emerged in the United States in its holistic four field form from the confluence of four lines of inquiry the British the French the German and the American As the discipline grew and became more specialized a tendency of divergence set in that weakened its holistic appeal Beginning in the 1960s a new movement arose within the discipline which called for abandoning science as anthropology's mission in order to convert into an instrument of social change a redefinition which weakens its effectiveness as a way of understanding humankind and which threatens to discredit the discipline
