Hansen, 2010-11-30 Rapid developments in electronics over the past two decades have induced a move from purely mechanical vehicles to mechatronics design Recent advances in computing sensors and information technology are pushing mobile equipment design to incorporate higher levels of automation under the novel concept of intelligent vehicles Mechatronics and Intelligent Systems for Off road Vehicles introduces this concept and provides an overview of recent applications and future approaches within this field Several case studies present real examples of vehicles designed to navigate in off road environments typically encountered by agriculture forestry and construction machines The examples analyzed describe and illustrate key features for agricultural robotics such as automatic steering safeguarding mapping and precision agriculture applications The eight chapters include numerous figures each designed to improve the reader's comprehension of subjects such as automatic steering systems navigation systems vehicle architecture image processing and vision and three dimensional perception and localization Mechatronics and Intelligent Systems for Off road Vehicles will be of great interest to professional engineers and researchers in vehicle automation robotics and the application of artificial intelligence to mobile equipment as well as to graduate students of mechanical electrical and agricultural engineering      Agents of Social Change Sung H. Bauta, 2022-07-15 This book goes where no other work has gone It refuses to conform to the conventional descriptions of the realities of widows in Africa Thus rather than approach the issue of widowhood from the vantage point of what society can do for widows the book considers what widows can do for society Christian widows in northern Nigeria are defying the restrictions assigned to their widowhood Remarriage and property inheritance for instance are not central to widows' ambitions Widows believe that they are not passive observers within society rather they are agents of social change Therefore they are drawing from their faith in religious social and economic engagements towards societal transformation Of the institutions that influence their lives Christian institutions provide the best guide for the embodied agency of Christian widows in northern Nigeria The theory of embodiment considers the ways Christian widows emulate the life of Jesus towards remaking society      **Engineering and Science of Biomass Feedstock Production and Provision** Yogendra Shastri, Alan Hansen, Luis Rodríguez, K.C. Ting, 2014-02-10 The biomass based energy sector especially the one based on lignocellulosic sources such as switchgrass Miscanthus forest residues and short rotation coppice will play an important role in our drive towards renewable energy The biomass feedstock production BFP subsystem provides the necessary material inputs to the conversion processes for energy

production This subsystem includes the agronomic production of energy crops and the physical handling and delivery of biomass as well as other enabling logistics Achieving a sustainable BFP system is therefore paramount for the success of the emerging bioenergy sector However low bulk and energy densities seasonal and weather sensitive availability distributed supply and lack of commercial scale production experience create unique challenges Moreover novel region specific feedstock alternatives continue to emerge Engineering will play a critical role in addressing these challenges and ensuring the techno economic feasibility of this sector It must also integrate with the biological physical and chemical sciences and incorporate externalities such as social economic considerations environmental impact and policy regulatory issues to achieve a truly sustainable system Tremendous progress has been made in the past few years while new challenges have simultaneously emerged that need further investigation It is therefore prudent at this time to review the current status and capture the future challenges through a comprehensive book This work will serve as an authoritative treatise on the topic that can help researchers educators and students interested in the field of biomass feedstock production with particular interest in the engineering aspects
